Methods Of Analysis For Functional Foods And Nutraceuticals Second Edition:

Methods of Analysis for Functional Foods and Nutraceuticals W. Jeffrey Hurst, 2008-03-17 In the quest for accurate and efficient analysis of the diverse area encompassed by functional foods and nutraceuticals analysts encounter unique challenges Uncertainty over which compound is responsible for a particular health benefit forces analysts to look for marker compounds sometimes at extremely low levels and sometimes as part of a matrix possessing its own individual obstacles Increasing interest from the media the scientific and nutritional community and the end consumer demand a single comprehensive resource focused on the analysis of this complex category *Methods of Analysis for Functional Foods and Nutraceuticals Second Edition* updates all analytical methods from the first edition to reflect dramatic advances in this field Providing timely and accurate information with contributions from national and international experts it presents more than 85 % new or revised information The addition of three entirely new chapters on the burgeoning field of polyphenol analysis reflects the growing interest in antioxidants by the scientific and lay community Divided into 10 chapters this book gathers updated in depth treatments of the methods of analysis for phytoestrogens fatty acids and conjugated linoleic acid flavonoids anthocyanins carotenoids and provitamin A chlorophylls water soluble vitamins amino acids and carbohydrates It also includes specialty information such as the use of residues from vineyards and oil production for phenolic compounds Thoroughly reviewed by a leading panel of scientific peers the second edition of this highly successful volume is an invaluable source of information for laboratories involved in the food dietary supplement and pharmaceutical industry

Spray Drying Techniques for Food Ingredient Encapsulation C. Anandharamakrishnan, Padma Ishwarya S., 2015-10-12 Spray drying is a well established method for transforming liquid materials into dry powder form Widely used in the food and pharmaceutical industries this technology produces high quality powders with low moisture content resulting in a wide range of shelf stable food and other biologically significant products Encapsulation technology for bioactive compounds has gained momentum in the last few decades and a series of valuable food compounds namely flavours carotenoids and microbial cells have been successfully encapsulated using spray drying *Spray Drying Technique for Food Ingredient Encapsulation* provides an insight into the engineering aspects of the spray drying process in relation to the encapsulation of food ingredients choice of wall materials and an overview of the various food ingredients encapsulated using spray drying The book also throws light upon the recent advancements in the field of encapsulation by spray drying i e nanospray dryers for production of nanocapsules and computational fluid dynamics CFD modeling Addressing the basics of the technology and its applications the book will be a reference for scientists engineers and product developers in the industry

Nutraceutical and Functional Food Processing Technology Joyce I. Boye, 2015-02-04 For several years the food industry has been interested in identifying components in foods which have health benefits to be used in the development of functional food and nutraceutical products Examples of these ingredients include fibre phytosterols peptides proteins isoflavones saponins phytic acid probiotics prebiotics and

functional enzymes Although much progress has been made in the identification extraction and characterisation of these ingredients there remains a need for ready and near market platform technologies for processing these ingredients into marketable value added functional food and nutraceutical products This book looks at how these ingredients can be effectively incorporated into food systems for market and provides practical guidelines on how challenges in specific food sectors such as health claims and marketing can be addressed during processing Nutraceutical and Functional Food Processing Technology is a comprehensive overview of current and emerging trends in the formulation and manufacture of nutraceutical and functional food products It highlights the distinctions between foods falling into the nutraceutical and functional food categories Topics include sustainable and environmentally friendly approaches to the production of health foods guidelines and regulations and methods for assessing safety and quality of nutraceutical and functional food products Specific applications of nutraceuticals in emulsion and salad dressing food products beverages and soft drinks baked goods cereals and extruded products fermented food products are covered as are novel food proteins and peptides and methods for encapsulated nutraceutical ingredients and packaging The impact of processing on the bioactivity of nutraceutical ingredients allergen management and the processing of allergen free foods health claims and nutraceutical food product commercialization are also discussed Nutraceutical and Functional Food Processing Technology is a comprehensive source of practical approaches that can be used to innovate in the nutraceutical and health food sectors Fully up to date and relevant across various food sectors the book will benefit both academia and industry personnel working in the health food and food processing sectors

Global Food Security and Supply Wayne Martindale, 2014-12-15 With the global population projected to reach 9 billion by the year 2050 the need for nations to secure food supplies for their populations has never been more pressing Finding better supply chain solutions is an essential part of achieving a secure and sustainable diet for a rapidly increasing population We are now in a position through methods including life cycle assessment LCA carbon footprinting and other tools to accurately measure and assess our use or misuse of natural resources including food The impact of new technologies and management systems can therefore improve efficiencies and find new ways to reduce waste Global Food Security and Supply provides robust succinct information for people who want to understand how the global food system works The book demonstrates the specific tools available for understanding how food supply works addresses the challenges facing a secure and safe global food supply and helps readers to appreciate how these challenges might be overcome This book is a concise and accessible text that focuses on recent data and findings from a range of international collaborations and studies The author provides both a snapshot of global food supply and security today and a projection of where these issues may lead us in the future This book will therefore be of particular interest to food policy leaders commercial managers in the food industry and researchers and students seeking a better understanding of a rapidly evolving topic

Nanotechnology and Functional Foods Cristina Sabliov, Hongda Chen, Rickey Yada, 2015-04-21 The continued advancement in the sciences of functional foods and nutraceuticals has clearly

established a strong correlation between consumption of bioactives and improved human health and performance. However, the efficacy and bioavailability of these bioactive ingredients e.g. omega 3 oils, carotenoid antioxidants, vitamins, and probiotic bacteria in foods often remains a challenge due to their instability in food products and gastrointestinal tract as well as their limited bioavailability. In some cases, these bioactive ingredients may impart an undesirable organoleptic characteristic to the final product which hinders acceptance by consumers. In addressing these challenges, development of effective delivery systems is critical to meet the consumer needs for effective bioactives. The scientific knowledge behind developing effective delivery of bioactive components into modern and wide ranging food products will be essential to reap their health promoting benefits and to support the sustained growth of the functional foods market.

Nanotechnology and Functional Foods: Effective Delivery of Bioactive Ingredients explores the current data on all aspects of nanoscale packing, carrying and delivery mechanisms of bioactive ingredients to functional foods. The book presents various delivery systems including nano emulsions, solid lipid nanoparticles and polymeric nano particles, their properties and interactions with other food components and fate in the human body. Later chapters emphasize the importance of consumers' attitude towards nano delivery for the success of the technology and investigate the challenges faced by regulatory agencies to control risks and harmonize approaches worldwide. The wide applicability of bioactive delivery systems with the purpose of improving food quality, food safety and human health will make this book a worthy reference for a diverse range of readers in industry, research and academia.

The Food Industry Innovation School Helmut Traitler, 2015-04-13. Innovation and new product development are increasingly perceived as drivers of profits in the food industry. Companies are dedicating a large amount of resources to these areas and it is crucial that individuals understand how to be part of this new strategy. Food Industry Innovation School focuses on key skills needed to drive new ideas from initial concepts through to successful products on the shelf. The author argues that any individual can learn how to lead innovation within complex organizations utilizing companies' commercial and financial resources. The book focuses on the impact of single individuals on company successes. Case studies from the marketplace provide valuable examples of accomplishments and failures. Product development involves a plethora of activities such as R & D, innovation, engineering, packaging and design, manufacturing, logistics and supply chain management as well as marketing, sales and finance, and the book addresses all these crucial functions undertaken by food companies and manufacturers of other packaged consumer goods. The learning principles and examples based on the author's personal experience are valid in many fast moving consumer goods organizations and so the principles, best practices and solutions offered in the 12 chapters are relevant to a wide audience in the food industry and beyond, including those working in household products, retail, the automotive industry, computers and IT, furniture and even media and publishing.
