Non-Convex Multi-Objective Optimization Panos M. Pardalos, Antanas Žilinskas, Julius Žilinskas, 2017-07-27 Recent results on non convex multi objective optimization problems and methods are presented in this book with particular attention to expensive black box objective functions Multi objective optimization methods facilitate designers engineers and researchers to make decisions on appropriate trade offs between various conflicting goals A variety of deterministic and stochastic multi objective optimization methods are developed in this book Beginning with basic concepts and a review of non convex single objective optimization problems this book moves on to cover multi objective branch and bound algorithms worst case optimal algorithms for Lipschitz functions and bi objective problems statistical models based algorithms and probabilistic branch and bound approach Detailed descriptions of new algorithms for non convex multi objective optimization their theoretical substantiation and examples for practical applications to the cell formation problem in manufacturing engineering the process design in chemical engineering and business process management are included to aide researchers and graduate students in mathematics computer science engineering economics and business management **Multi-Objective**

Optimization Problems Fran Sérgio Lobato, Valder Steffen Jr., 2017-07-03 This book is aimed at undergraduate and graduate students in applied mathematics or computer science as a tool for solving real world design problems The present work covers fundamentals in multi objective optimization and applications in mathematical and engineering system design using a new optimization strategy namely the Self Adaptive Multi objective Optimization Differential Evolution SA MODE algorithm This strategy is proposed in order to reduce the number of evaluations of the objective function through dynamic update of canonical Differential Evolution parameters population size crossover probability and perturbation rate The methodology is applied to solve mathematical functions considering test cases from the literature and various engineering systems design such as cantilevered beam design biochemical reactor crystallization process machine tool spindle design rotary dryer design among others *Evolutionary Algorithms for Solving Multi-Objective Problems* Carlos A. Coello Coello, David A. Van Veldhuizen, Gary B. Lamont, 2002 The solving of multi objective problems MOPs has been a continuing effort by humans in many diverse areas including computer science engineering economics finance industry physics chemistry and ecology among others Many powerful and deterministic and stochastic techniques for solving these large dimensional optimization problems have risen out of operations research decision science engineering computer science and other related disciplines The explosion in computing power continues to arouse extraordinary interest in stochastic search algorithms that require high computational speed and very large memories A generic stochastic approach is that of evolutionary algorithms EA Such algorithms have been demonstrated to be very powerful and generally applicable for solving different single objective problems Their fundamental algorithmic structures can also be applied to solving many multi objective problems In this book the various features of multi objective evolutionary algorithms MOEAs are presented in an

innovative and unique fashion with detailed customized forms suggested for a variety of applications Also extensive MOEA discussion questions and possible research directions are presented at the end of each chapter For additional information and supplementary teaching materials please visit the authors website at <http://www.cs.cinvestav.mx/EVOCINV/bookinfo.html>

Computational Intelligence - Volume II Hisao Ishibuchi, 2015-12-30 Computational intelligence is a component of Encyclopedia of Technology Information and Systems Management Resources in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias Computational intelligence is a rapidly growing research field including a wide variety of problem solving techniques inspired by nature Traditionally computational intelligence consists of three major research areas Neural Networks Fuzzy Systems and Evolutionary Computation Neural networks are mathematical models inspired by brains Neural networks have massively parallel network structures with many neurons and weighted connections Whereas each neuron has a simple input output relation a neural network with many neurons can realize a highly non linear complicated mapping Connection weights between neurons can be adjusted in an automated manner by a learning algorithm to realize a non linear mapping required in a particular application task Fuzzy systems are mathematical models proposed to handle inherent fuzziness in natural language For example it is very difficult to mathematically define the meaning of cold in everyday conversations such as It is cold today and Can I have cold water The meaning of cold may be different in a different situation Even in the same situation a different person may have a different meaning Fuzzy systems offer a mathematical mechanism to handle inherent fuzziness in natural language As a result fuzzy systems have been successfully applied to real world problems by extracting linguistic knowledge from human experts in the form of fuzzy IF THEN rules Evolutionary computation includes various population based search algorithms inspired by evolution in nature Those algorithms usually have the following three mechanisms fitness evaluation to measure the quality of each solution selection to choose good solutions from the current population and variation operators to generate offspring from parents Evolutionary computation has high applicability to a wide range of optimization problems with different characteristics since it does not need any explicit mathematical formulations of objective functions For example simulation based fitness evaluation is often used in evolutionary design Subjective fitness evaluation by a human user is also often used in evolutionary art and music These volumes are aimed at the following five major target audiences University and College students Educators Professional practitioners Research personnel and Policy analysts managers and decision makers
