**Math Is Easy So Easy, Algebra I** Nathaniel Max Rock, 2008-02 There are many self help math books available but none are quite like this one. Math Is Easy So Easy first separates math topics into those which are essential and nonessential. The struggling math student and parent of a struggling math student must be able to focus on the math topics which will return the greatest effect in the shortest amount of time. Furthermore, math teachers and math textbooks simply try to cover too much material, the bulk of which has no impact on a student's successful completion of math up through calculus in high school. Second, Math Is Easy So Easy tries to provide clarity of instruction for a few problems which cover the important aspects of the essential topics. Contrary to most math teacher instruction, it is more important and beneficial to know a few key problems well than to try to cover many problems only superficially. If you are the parent of a student who is struggling in math, you know how frustrating it can be to get to the bottom of what your student really needs to know to

survive and persist in math up through calculus in high school. You also know how important it is that your student stay in math as long as possible in high school so that they are better prepared to enter and succeed in college. You also no doubt know how seemingly unreasonable your struggling student's math teacher can be in terms of communicating with you and your student. As a math teacher for many years now, Max wrote this book to help you and your struggling math student survive math with as few "I hate math" outbursts as possible. Lastly, Max has personally witnessed many students who struggle in math in high school who then go on to mature into great engineers and scientists. This book will help your student to stay in math longer and be more successful. There is a separate book for each of six math classes: 7th Grade Math, Algebra I, Geometry I, Algebra II, Math Analysis, and Calculus. There is a single "Combo" book with all six books in one. Make sure you get the right book for your needs. Nathaniel Max Rock, an engineer by training, has taught math in middle school and high school, including math classes: 7th Grade Math, Algebra I, Geometry I, Algebra II, Math Analysis, and AP Calculus. Max has been documenting his math curricula since 2002 in various forms, some of which can be found on MathForEveryone.com, StandardsDrivenMath.com, and MathIsEasySoEasy.com. Max is also an AVID elective teacher and the lead teacher for the Academy of Engineering at his high school.

*An Overview of IGAP Performance Standards for Reading, Mathematics, and Writing, 1992*    *Can Students Do Mathematical Problem Solving?* John A. Dossey, 1993    **Houghton Mifflin Math Book Level 8** Ernest R. Duncan, W. G. Quast, 1985    *NAEP 1992 Mathematics Report Card for the Nation and the States* Ina V. S. Mullis, 1993

This report presents the mathematics assessment results from the 1992 National Assessment of Educational Progress (NAEP). The assessment included nearly 250,000 fourth, eighth, and twelfth grade students attending approximately 10,000 schools across the nation and the states. Students' performance is categorized into three achievement levels: Basic, Proficient, and Advanced. Among the major findings were that for the nation there were statistically significant increases in average mathematics proficiency in all grades and in both public and private schools from 1990 to 1992. Despite these positive findings, 60 percent of the students in grades 4, 8, and 12 were estimated to be at or above the Basic level on the 1992 mathematics assessment. Considerable variation in performance existed within and across states and territories. Increases in mathematics proficiency between 1990 and 1992 did little to alter the relative standings of the demographic groups. Gains were noted in the content areas of numbers and operations, measurement, geometry, data analysis, and algebra. One fifth of the 4th graders, two thirds of the 8th graders, and 90 percent of the 12th graders demonstrated ability in solving two-step problems involving multiplication and division. Chapter 1 contains overall achievement results for the states by grade and by state. Chapter 2 contains results for the nation and states by the demographic groups of race/ethnicity: White, Black, Hispanic, Asian, Pacific Islander, American Indian, gender, type of community, advantaged, urban, disadvantaged, urban, extreme, rural, and other parents' highest level of education and type of school (public, Catholic, private). Chapter 3 contains national and state mathematical content areas of estimation, numbers and operations, measurement, geometry, statistics, algebra, and functions. The four appendices, one third of the document, discuss NAEP's anchor level results, the guidelines for sample participation, state contextual background factors, and an overview of the procedures used in the 1992 mathematics assessments.
