## Nice Algorithmic Life Calculative Devices Data:

Algorithmic Life Louise Amoore, Volha Piotukh, 2015-12-22 This book critically explores forms and techniques of calculation that emerge with digital computation and their implications. The contributors demonstrate that digital calculative devices matter beyond their specific functions as they progressively shape, transform and govern all areas of our life. In particular, it addresses such questions as: How does the drive to make sense of and productively use large amounts of diverse data inform the development of new calculative devices' logics and techniques? How do these devices' logics and techniques affect our capacity to decide and to act? How do mundane elements of our physical and virtual existence become data to be analysed and rearranged in complex ensembles of people and things? In what ways are conventional notions of public and private, individual and population, certainty and probability, rule and exception, transformed and what are the consequences? How does the search for hidden connections and patterns change our understanding of social relations and associative life? Do contemporary modes of calculation produce new thresholds of calculability and computability, allowing for the improbable or the merely possible to be embraced and acted upon? As contemporary approaches to governing uncertain futures seek to anticipate future events, how are calculation and decision engaged anew? Drawing together different strands of cutting edge research that is both theoretically sophisticated and empirically rich, this book makes an important contribution to several areas of scholarship including the emerging social science field of software studies and will be a vital resource for students and scholars alike.

*Business and the Ethical Implications of Technology* Kirsten Martin, Katie Shilton, Jeffery Smith, 2022-11-09 This book focuses on how firms should engage ethical choices in developing and deploying digital technologies. Digital technologies are devices that rely on rapidly accelerating digital sensing, storage and transmission capabilities to intervene in human processes. While the ethics of technology is analyzed across disciplines from science and technology studies, STS, engineering, computer science, critical management studies and law, less attention is paid to the role that firms and managers play in the design, development and dissemination of technology across communities and within their firm. This book covers the topic from three angles. First, it illuminates diverse facets of the intersection of technology and business ethics. Second, it uses themes to explore what business ethics offers to the study of technology and, third, what technology studies offers to the field of business ethics. Each field brings expertise that together improves our understanding of the ethical implications of technology. *Race in the Anthropocene* Farai Chipato,David Chandler,2024-08-14 Race in the Anthropocene provides a radical new perspective on the importance of race and coloniality in the Anthropocene It forwards the Black Horizon as a critical lens which places at its heart the importance of ontological concerns fundamental to problematising the violences and exclusions of the antiblack world At present multiple new approaches are emerging through the shared problem field of Anthropocene thought and policy offering to save not just the world but the practice of governance the business of Big Data the progress of development and the dream of peace It is against this backdrop that Race in the Anthropocene unsettles not just the already shaky foundations of modernity but also the affirmative visions of its critics by directing our gaze to how race and coloniality are baked into the grounding concepts of international thought This book is essential reading for students of International Relations particularly those interested in international politics security and development It is also of relevance for those interested in contemporary social political and environmental debates and policy practices

**Algorithms of Education** Kalervo N. Gulson, Sam Sellar, P. Taylor Webb,2022-05-17 A critique of what lies behind the use of data in contemporary education policy While the science fiction tales of artificial intelligence eclipsing humanity are still very much fantasies in Algorithms of Education the authors tell real stories of how algorithms and machines are transforming education

governance providing a fascinating discussion and critique of data and its role in education policy Algorithms of Education explores how for policy makers today s ever growing amount of data creates the illusion of greater control over the educational futures of students and the work of school leaders and teachers In fact the increased datafication of education the authors argue offers less and less control as algorithms and artificial intelligence further abstract the educational experience and distance policy makers from teaching and learning Focusing on the changing conditions for education policy and governance Algorithms of Education proposes that schools and governments are increasingly turning to synthetic governance a governance where what is human and machine becomes less clear as a strategy for optimizing education Exploring case studies of data infrastructures facial recognition and the growing use of data science in education Algorithms of Education draws on a wide variety of fields from critical theory and media studies to science and technology studies and education policy studies mapping the political and methodological directions for engaging with datafication and artificial intelligence in education governance According to the authors we must go beyond the debates that separate humans and machines in order to develop new strategies for and a new politics of education      **ASHRAE Handbook** ,2007      **The**
