## Meridians Or Five Elements A2:

Real Homotopy of Configuration Spaces Najib Idrissi, 2022-06-11 This volume provides a unified and accessible account of recent developments regarding the real homotopy type of configuration spaces of manifolds Configuration spaces consist of collections of pairwise distinct points in a given manifold the study of which is a classical topic in algebraic topology One of this theory's most important questions concerns homotopy invariance if a manifold can be continuously deformed into another one then can the configuration spaces of the first manifold be continuously deformed into the configuration spaces of the second This conjecture remains open for simply connected closed manifolds Here it is proved in characteristic zero i.e. restricted to algebrotopological invariants with real coefficients using ideas from the theory of operads A generalization to manifolds with boundary is then considered Based on the work of Campos Ducoulombier Lambrechts Willwacher and the author the book covers a vast array of topics including rational homotopy theory compactifications PA forms propagators Kontsevich integrals and graph complexes and will be of interest to a wide audience      **Variational Problems in Topology**

A.T. Fomenko, 2019-06-21 Many of the modern variational problems in topology arise in different but overlapping fields of scientific study mechanics physics and mathematics In this work Professor Fomenko offers a concise and clean explanation of some of these problems both solved and unsolved using current methods and analytical topology The author's skillful exposition gives an unusual motivation to the theory expounded and his work is recommended reading for specialists and nonspecialists alike involved in the fields of physics and mathematics at both undergraduate and graduate levels      **The**
