**Evaluation of Novel Approaches to Software Engineering** Leszek A. Maciaszek,Pericles Loucopoulos,2011-12-13

This book contains a collection of thoroughly refereed papers presented at the 5th International Conference on Evaluation of Novel Approaches to Software Engineering ENASE 2010 held in Athens Greece in July 2010 The 19 revised and extended full papers were carefully selected from 70 submissions They cover a wide range of topics such as quality and metrics service and Web engineering process engineering patterns reuse and open source process improvement aspect oriented engineering and requirements engineering

**Metamodeling for Method Engineering** Manfred Jeusfeld,Matthias Jarke,John

Mylopoulos,2009 A practical guide to method engineering based on metamodeling with theoretical foundations and case studies suitable for classroom use or as a reference for practitioners This text is a guide to the foundations of method engineering a developing field concerned with the definition of techniques for designing software systems The approach is based on metamodeling the construction of a model about a collection of other models The book applies the metamodeling approach in five case studies each describing a solution to a problem in a specific domain Suitable for classroom use the book is also useful as a reference for practitioners The book first presents the theoretical basis of metamodeling for method engineering discussing information modeling the potential of metamodeling for software systems development and the introduction of the metamodeling tool ConceptBase The second and larger portion of the book reports on applications of the metamodeling approach to method engineering These detailed case studies range from telecommunication service specification hypermedia design and data warehousing to cooperative requirements engineering chemical device modeling and design of new abstraction principles of modeling languages Although these chapters can stand alone as case studies they also relate to the earlier theoretical chapters The metamodeling approach described in the book is based on the Telos metamodeling language implemented by the ConceptBase system An accompanying CD ROM contains the ConceptBase system and a large collection of Telos metamodels discussed in the text The CD ROM enables readers to start directly with method engineering from small method chunks up to complete method definitions The complete definition of Ed Yourdon's structured analysis method is included as an instructional example

**Information Systems Engineering** Sjaak Brinkkemper,2000 This book contains a collection of 24 state of the art contributions in the area of Information Systems Engineering It was compiled as a tribute to Professor Janis Bubenko on the occasion of his retirement

from the University of Stockholm in February 2000 The contributions are arranged in three sections Information Society with such subjects as B2B E Commerce human imperfection stream data management and enterprise modeling Approaches to Information Systems Engineering discussing data warehouse development web enabled methods reuse and meta data Concepts for Information Systems on more fundamental notions such as time abstraction co operation intention and information All the contributors are well known and highly reputed scholars in the area of Information Systems Engineering from all over the world On the Mathematics of Modelling, Metamodelling, Ontologies and Modelling Languages Brian Henderson-Sellers,2012-06-13 Computing as a discipline is maturing rapidly However with maturity often comes a plethora of subdisciplines which as time progresses can become isolationist The subdisciplines of modelling metamodelling ontologies and modelling languages within software engineering e g have to some degree evolved separately and without any underpinning formalisms Introducing set theory as a consistent underlying formalism Brian Henderson Sellers shows how a coherent framework can be developed that clearly links these four previously separate areas of software engineering In particular he shows how the incorporation of a foundational ontology can be beneficial in resolving a number of controversial issues in conceptual modelling especially with regard to the perceived differences between linguistic metamodelling and ontological metamodelling An explicit consideration of domain specific modelling languages is also included in his mathematical analysis of models metamodels ontologies and modelling languages This encompassing and detailed presentation of the state of the art in modelling approaches mainly aims at researchers in academia and industry They will find the principled discussion of the various subdisciplines extremely useful and they may exploit the unifying approach as a starting point for future research **Advanced Information Systems Engineering** ,2004
