Penetration Testing of Computer Networks Using Burpsuite and Various Penetration Testing Tools Dr. Hidaia Mahmood Alassouli, 2023-03-11 Burp Suite is an integrated platform graphical tool for performing security testing of web applications. Burp suite is a java application that can be used to secure or crack web applications. The suite consists of different tools like a proxy server, a web spider, an intruder, and a so-called repeater with which requests can be automated. You can use Burp's automated and manual tools to obtain detailed information about your target applications. Damn Vulnerable Web App (DVWA) is a PHP MySQL web application that is damn vulnerable. Its main goals are to be an aid for security professionals to test their skills and tools in a legal environment, help web developers better understand the processes of securing web applications, and aid teachers/students to teach/learn web application security in a classroom environment. In this report, I am using a combination of Burp tools to detect and exploit vulnerabilities in Damn Vulnerable Web App (DVWA) with low security. By default, Burp Scanner scans all requests and responses that pass through the proxy. Burp lists any issues that it identifies under Issue activity on the Dashboard. You can also use Burp Scanner to actively audit for vulnerabilities. Scanner sends additional requests and analyzes the application's traffic and behavior to identify issues. Various examples are outlined in this report for different types of vulnerabilities such as SQL injection, Cross Site Request Forgery (CSRF), Cross site scripting, File upload, Local and Remote File Inclusion. I tested various types of penetration testing tools in order to exploit different types of vulnerabilities. The report consists of the following parts: 1. Installing and Configuring BurpSuite 2. BurpSuite Intruder 3. Installing XMAPP and DVWA App in Windows System 4. Installing PHP MySQL Apache2 Python and DVWA App in Kali Linux 5. Scanning Kali Linux and Windows Using 6. Understanding Netcat Reverse Shells and Bind Shells 7. Adding Burps Certificate to Browser 8. Setting up Target Scope in BurpSuite 9. Scanning Using BurpSuite 10. Scan results for SQL Injection Vulnerability with BurpSuite and Using SQLMAP to Exploit the SQL injection 11. Scan Results for Operating System Command Injection Vulnerability with BurpSuite and Using Commix to Exploit the OS Command Injection 12. Scan Results for Cross Site Scripting (XSS) Vulnerability with BurpSuite Using Xserve to exploit XSS Injection and Stealing Web Login Session Cookies through the XSS Injection 13. Exploiting File Upload Vulnerability 14. Exploiting Cross Site Request Forgery (CSRF) Vulnerability 15. Exploiting File Inclusion Vulnerability 16. References
