Methods Of Information Geometry Translations Of Mathematical Monographs Tanslations Of Mathematical Monographs:

Methods of Information Geometry Shun-ichi Amari,Hiroshi Nagaoka,2000 Information geometry provides the mathematical sciences with a new framework of analysis It has emerged from the investigation of the natural differential geometric structure on manifolds of probability distributions which consists of a Riemannian metric defined by the Fisher information and a one parameter family of affine connections called the alpha connections The duality between the alpha connection and the alpha connection together with the metric play an essential role in this geometry This kind of duality having emerged from manifolds of probability distributions is ubiquitous appearing in a variety of problems which might have no explicit relation to probability theory Through the duality it is possible to analyze various fundamental problems in a unified perspective The first half of this book is devoted to a comprehensive introduction to the mathematical foundation of information geometry including preliminaries from differential geometry the geometry of manifolds or probability distributions and the general theory of dual affine connections The second half of the text provides an overview of many areas of applications such as statistics linear systems information theory quantum mechanics convex analysis neural networks and affine differential geometry The book can serve as a suitable text for a topics course for advanced undergraduates and graduate students Information Geometry Nihat Ay,Jürgen Jost,Hông Vân Lê,Lorenz Schwachhöfer,2017-08-25 The book provides a comprehensive introduction and a novel mathematical foundation of the field of information geometry with complete proofs and detailed background material on measure theory Riemannian geometry and Banach space theory Parametrised measure models are defined as fundamental geometric objects which can be both finite or infinite dimensional Based on these models canonical tensor fields are introduced and further studied including the Fisher metric and the Amari Chentsov tensor and embeddings of statistical manifolds are investigated This novel foundation then leads to application highlights such as generalizations and extensions of the classical uniqueness result of Chentsov or the Cram r Rao inequality Additionally several new application fields of information geometry are highlighted for instance hierarchical and graphical models complexity theory population genetics or Markov Chain Monte Carlo The book will be of interest to mathematicians who are interested in geometry information theory or the foundations of statistics to statisticians as well as to scientists interested in the mathematical foundations of complex systems *Information Geometry* Geert Verdoolaege,2019-04-04 This Special Issue of the journal Entropy titled Information Geometry I contains a collection of 17 papers concerning the foundations and applications of information geometry Based on a geometrical interpretation of probability information geometry has become a rich mathematical field employing the methods of differential geometry It has numerous applications to data science physics and neuroscience Presenting original research yet written in an accessible tutorial style this collection of papers will be useful for scientists who are new to the field while providing an excellent

reference for the more experienced researcher Several papers are written by authorities in the field and topics cover the foundations of information geometry as well as applications to statistics Bayesian inference machine learning complex systems physics and neuroscience **CONTROLO 2024** Antonio Pedro Aguiar,Paula Rocha Malonek,Vítor Hugo Pinto,Fernando A. C. C. Fontes,Roman Chertovskih,2025-04-22 This book offers a perfect insight of the latest research and developments in the fields of dynamic systems and control engineering Gathering the proceedings of the 16th APCA International Conference on Automatic Control and Soft Computing CONTROLO 2024 held on July 17 19 2024 in Porto Portugal this volume covers a wide range of theoretical and practical issues relating to the development and use of different control approaches such as PID control adaptive control non linear control intelligent monitoring and control based on fuzzy and neural systems Further topics include robust control systems and real time control Sensors and actuators measurement systems renewable energy systems aeronautic and aerospace systems as well as industrial control and automation are also comprehensively covered All in all this book offers a timely and thoroughly survey of the latest research in the fields of dynamic systems and automatic control engineering and a source of inspiration for researchers and professionals worldwide
