

New Way Additional Mathematics is a student-oriented series to help students learn the relevant concepts and skills for the Additional Mathematics syllabus for Hong Kong. It not only includes abundant self-exploring materials for the Hong Kong Certificate of Education Examination, but also bridges the gap between the three levels of mathematics and covers more than Mathematics 1. This comprehensive mathematical and grammatical series is an innovative Additional Mathematics textbook for both students and teachers.

Special Features:

- Simple and clear English
- Inductive and conceptual approach
- Well graded examples and carefully selected exercises
- Most boxes and tips helping students to understand difficult ideas in solutions and learn the solving techniques
- Abundant graded exercises containing the latest trends in technology
- Chapter objectives and summary at the beginning and the end of each chapter respectively giving brief introduction and detailed learning materials covered
- Full indexes giving further examples and practice that improve the learning materials at each topic
- Concepts, theorems and formulae highlighted in colour boxes
- Chinese translations of mathematical terms
- Appendix consisting of answers and index

In addition, the Teacher's Edition that incorporates comprehensive teaching materials, suggested solutions for all problems and exercises, and comments for MCQs questions is provided for teachers to help them in preparing lessons.

Mindset Mathematics:

Visualizing and Investigating Big Ideas, Grade 3 Jo Boaler, Jen Munson, Cathy Williams, 2018-07-31 Engage students in mathematics using growth mindset techniques The most challenging parts of teaching mathematics are engaging students and helping them understand the connections between mathematics concepts In this volume you ll find a collection of low floor high ceiling tasks that will help you do just that by looking at the big ideas at the third grade level through visualization play and investigation During their work with tens of thousands of teachers authors Jo Boaler Jen Munson and Cathy Williams heard the same message that they want to incorporate more brain science into their math instruction but they need guidance in the techniques that work best to get across the concepts they needed to teach So the authors designed Mindset Mathematics around the principle of active student engagement with tasks that reflect the latest brain science on learning Open creative and visual math tasks have been shown to improve student test scores and more importantly change their relationship with mathematics and start believing in their own potential The tasks in Mindset Mathematics reflect the lessons from brain science that There is no such thing as a math person anyone can learn mathematics to high levels Mistakes struggle and challenge are the most important times for brain growth Speed is unimportant in mathematics Mathematics is a visual and beautiful subject and our brains want to think visually about mathematics With engaging questions open ended tasks and four color visuals that will help kids get excited about mathematics Mindset Mathematics is organized around nine big ideas which emphasize the connections within the Common Core State Standards CCSS and can be used with any current curriculum

Second Handbook of Research on Mathematics Teaching and Learning Frank K. Lester, 2007-02-01 The audience remains much the same as for the 1992 Handbook namely mathematics education researchers and other scholars conducting work in mathematics education This group includes college and university faculty graduate students investigators in research and development centers and staff members at federal state and local agencies that conduct and use research within the discipline of mathematics The intent of the authors of this volume is to provide useful perspectives as well as pertinent information for conducting investigations that are informed by previous work The Handbook should also be a useful textbook for graduate research seminars In addition to the audience mentioned above the present Handbook contains chapters that should be relevant to four other groups teacher educators curriculum developers state and national policy makers and test developers and others involved with assessment Taken as a whole the chapters reflects the mathematics education research community s willingness to accept the challenge of helping the public understand what mathematics education research is all about and what the relevance of their research findings might be for those outside their immediate community
