Multiple Access Protocols Raphael Rom, Moshe Sidi, 2012-12-06 Computer communication networks have come of age Today there is hardly any professional particularly in engineering that has not been the user of such a network This proliferation requires the thorough understanding of the behavior of networks by those who are responsible for their operation as well as by those whose task it is to design such networks This is probably the reason for the large number of books monographs and articles treating relevant issues problems and solutions in this field Among all computer network architectures those based on broadcast multiple access channels stand out in their uniqueness These networks appear naturally in environments requiring user mobility where the use of any fixed wiring is impossible and a wireless channel is the only available option Because of their desirable characteristics multiple access networks are now used even in environments where a wired point to point network could have been installed The understanding of the operation of multiple access network through their performance analysis is the focus of this book Internetworking and Computing Over Satellite Networks Yongguang Zhang, 2012-12-06 Communications via satellite introduces a number of new technical problems for mobile networks and applications Satellite links have fundamentally different properties from terrestrial wired or wireless networks Some of the properties include larger latency bursty error characteristics asymmetric capability and unconventional network architecture These differences have far reaching effects on many satellite communication issues Internetworking and Computing over Satellite Networks s emphasis is on data networking internetworking and distributed computing issues The material surveys recent work in the area of satellite networks introduces certain state of the art technologies and presents recent research results in these areas A variety of issues involving applications network architecture medium access controls multicast routing asymmetric routing transport protocols TCP performance enhancement techniques data broadcast and information disseminations are addressed This is one of the first books to be focused on the internetworking and computing aspect of satellite networks Satellite Communication Engineering Michael Olorunfunmi Kolawole, 2017-07-12 An undeniably rich and thorough guide to satellite communication engineering Satellite Communication Engineering Second Edition presents the fundamentals of information communications systems in a simple and succinct way This book considers both the engineering aspects of satellite systems as well as the practical issues in the broad field of information transmission Implementing concepts developed on an intuitive physical basis and utilizing a combination of applications and performance curves this book starts off with a progressive foundation in satellite technology and then moves on to more complex concepts with ease What s New in the Second Edition The second edition covers satellite and Earth station design global positioning systems antenna tracking links and communications systems error detection and correction data security regulations and procedures for system modeling integration testing and reliability and performance evaluation Provides readers with the systems building blocks of satellite transponders and Earth stations as well as the

systems engineering design procedure Includes the tools needed to calculate basic orbit characteristics such as period dwell time coverage area propagation losses antenna system features such as size beamwidth aperture frequency product gain tracking control and system requirements such as power availability reliability and performance Presents problem sets and starred sections containing basic mathematical development Details recent developments enabling digital information transmission and delivery via satellite Satellite Communication Engineering Second Edition serves as a textbook for students and a resource for space agencies and relevant industries *Automatic Control and Computer Sciences*, 1993

National Bureau of Standards, 1982 **New Technical Books** New York Public Library, 1991 **Stochastic Analysis of Computer and Communication Systems** Hideaki Takagi, 1990 Analytical techniques for evaluating the performance of computer and communication systems have evolved hand in hand with the progress in these systems since the late 1960 s and an enormous amount of knowledge has been accumulated in this interplay of applied mathematics and computer science This book includes nineteen lengthy surveys of the state of the art of performance evaluation techniques and an extensive bibliography The topics include stochastic processes and queueing theory applied to performance analysis and performance models of computer systems and communication networks Articles have been contributed by leading scientists from five continents **International Conference on EC3-Energy, Computer, Communication, and Control Systems, August 28-30, 1991: Computer and communication**, 1991

**Data Communications, Computer Networks, and Open Systems** Fred Halsall, 1992 The long awaited revision of Halsall s bestselling introduction to data communications networks and open systems In addition to completely revising the material on networking networking management and open distributed processing application protocols have been expanded to include MHS X400 VT EDI and X500 *Communication and Computer Networks* Michael E. Woodward, 1994 This book is concerned exclusively with discrete time queues and their applications to the performance modeling of communication and computer networks Since most modern networks operate on the basis of time slotting and transmit information in fixed length packets or cells it thus becomes natural to model such networks in discrete time by associating a time slot in a physical network with the unit time in the corresponding discrete time model The book shows how in this way very accurate models that faithfully reproduce the stochastic behaviour of a communication or computer network can be constructed The treatment is self contained and progresses from basic probability theory and discrete time queueing networks These latter are applied to model the performance of numerous wide area satellite networks and local area networks ranging in complexity from simple Aloha schemes to the timed token protocol of the FDDI network The main objective of this book is to

present a unified method for modeling any network access protocol as a discrete time queueing network and to develop efficient solution techniques for these models. A significant number of the models and their solutions which are included have not previously appeared in the open literature. The text should prove useful to practitioners and researchers concerned with communication and computer network performance modeling or anyone wanting a sound understanding of the application of discrete time technique to this subject area. *Communications, Architectures & Protocols*, 1991 Principles of Communication and Networking Protocols Simon S. Telecommunications Engineer's Reference Book maintains a balance between developments and established technology in telecommunications. This book consists of four parts. Part 1 introduces mathematical techniques that are required for the analysis of telecommunication systems. The physical environment of telecommunications and basic principles such as the teletraffic theory, electromagnetic waves, optics and vision, ionosphere and troposphere, and signals and noise are described in Part 2. Part 3 covers the political and regulatory environment of the telecommunications industry, telecommunication standards, open system interconnect reference model, multiple access techniques, and network management. The last part deliberates telecommunication applications that includes synchronous digital hierarchy, asynchronous transfer mode, integrated services, digital network switching systems, centrex, and call management. This publication is intended for practicing engineers and as a supplementary text for undergraduate courses in telecommunications. **Electrical & Electronics Abstracts**, 1997
