## **Multirate Statistical Signal Processing Author Omid S Jahromi Nov 2010:**

**Multirate Statistical Signal Processing** Omid S. Jahromi, 2007-05-15 The field of multirate signal processing has witnessed a great deal of progress and an increasingly wide range of applications since the publication of the first textbook by Crochiere and Rabiner 1983. However this progress has been mainly in the area of deterministic systems with emphasis on perfect reconstruction and/or orthogonal systems. This book introduces a statistical theory for extracting information from signals that have different sampling rates. This new theory generalizes the conventional deterministic theory of multirate systems beyond many of its constraints. Furthermore, it allows for the formulation of several new problems such as spectrum estimation, time delay estimation and sensor fusion in the realm of multirate signal processing. I have arrived at the theory presented here by integrating concepts from diverse areas such as information theory, inverse problems and theory of equalities. The process of merging a variety of concepts of different origin results in both merits and shortcomings. The former include the fresh and differentiated view of an amateur providing scope of application. The latter include a lack of in-depth experience in each of the original fields. Granted this may lead to gaps in continuity, however it goes without saying that a complete theory can seldom be achieved by one person and in a short time. My goal in writing this book has been to inspire the reader to initiate his own research and add to the theory of multirate statistical signal processing.

**Processing** Swagata Nandi, Debasis Kundu, 2020-08-21 This book introduces readers to various signal processing models that have been used in analyzing periodic data and discusses the statistical and computational methods involved. Signal processing can broadly be considered to be the recovery of information from physical observations. The received signals are usually disturbed by thermal, electrical, atmospheric or intentional interferences and due to their random nature, statistical techniques play an important role in their analysis. Statistics is also used in the formulation of appropriate models to describe the behavior of systems, the development of appropriate techniques for estimation of model parameters and the assessment of the model performances. Analyzing different real world data sets to illustrate how different models can be used in practice and highlighting open problems for future research, the book is a valuable resource for senior undergraduate and graduate students specializing in mathematics or statistics.

**Theory of Multirate Statistical Signal Processing and Applications ,2005** This dissertation develops basic theory and applications of statistical multirate signal processing Specific tools and terminology for describing multirate systems in the time and frequency domains are presented An optimal multirate estimator is derived in both a direct form and recursive form The Recursive form of the optimal estimator allows calculation of the relative change in performance when input signals are added or removed from the multirate system The optimal multirate filtering problem also is specialized to the case of optimal multirate linear prediction An efficient method for calculating the multirate linear prediction coefficients and error variances is developed through the use of the multichannel Levinson recursion and generalized triangular UL factorization Finally a multirate sequential classifier is derived and applied to the problem of target classification It is shown that classifier parameters needed for implementing the multirate sequential classifier are the same as those for multirate linear prediction The methods presented in this dissertation are useful for multisensor fusion particularly when the sensors are operating at different rates
