**Monodromy Representations and Lyapunov Exponents of Origamis** André Kappes, 2014-09 Origamis are translation surfaces obtained by gluing finitely many unit squares and provide an easy access to Teichmüller curves. In particular their monodromy representation can be explicitly determined. A general principle for the decomposition of this representation is exhibited and applied to examples. Closely connected to it is a dynamical cocycle on the Teichmüller curve. It is shown that its Lyapunov exponents otherwise inaccessible can be computed for a subrepresentation of rank two.
