The acronym TCP IP stands for Transmission Control Protocol Internet Protocol and refers to a family of network protocols which are the basis for communication and data exchange over the internet as well as on private IP networks The development of TCP IP already began in the 1970s and traces back to the work of DARPA Whilst the protocol family used to compete with alternative protocols such as AppleTalk by Apple IPX SPX by Novell or NetBEUI by Microsoft TCP IP has now established itself as a universal and worldwide popular protocol It is platform independent and available for devices with all operating systems imaginable The reasons for the success of the protocol family are the victory of the Internet as well as its flexibility and versatility
