**The Current Challenges Underlying Hepatitis D Virus Infection** Valentina Svicher, Patrick Kennedy, Romina Salpini, 2024-01-22 The Human Hepatitis D virus HDV is one of the smallest human RNA viruses 22 nm characterized by the peculiarity to require Hepatitis B virus HBV for its replication Indeed HDV utilizes HBV surface glycoprotein HBsAg for viral entry assembly and release implying the need for an intrahepatic transcriptionally active HBV to ensure HDV replication Chronic HBV HDV coinfection is associated with a high risk of developing liver cirrhosis and hepatocellular carcinoma within 5 10 years resulting in high fatality rate Recent estimates suggest that 9 60 million individuals may be infected with HDV worldwide However these fluctuating estimates highlight a huge uncertainty about the real prevalence of HDV infection mostly related to the lack of robust data on large populations of HBsAg positive patients undergoing HDV screening This highlights the need of accurate screening programs that finely trace the circulation of HDV *Recent highlights in*

makes us vulnerable to pandemics and gives us the power to save ourselves The COVID 19 pandemic won't be our last because what makes us vulnerable to pandemics also makes us human That is the uncomfortable but all too timely message of *The Human Disease* which travels through history and around the globe to examine how and why pandemics are an inescapable threat of our own making Drawing on dozens of disciplines from medicine epidemiology and microbiology to anthropology sociology ecology and neuroscience as well as a unique expertise in public education about pandemic risks

biological anthropologist Sabrina Sholts identifies the human traits and tendencies that double as pandemic liabilities from the anatomy that defines us to the misperceptions that divide us Weaving together a wealth of personal experiences scientific findings and historical stories Sholts brings dramatic and much needed clarity to one of the most profound challenges we face as a species Though the COVID 19 pandemic looms large in Sholts s account it is in fact just one of the many infectious disease events explored in *The Human Disease* With its expansive evolutionary perspective the book explains how humanity will continue to face new pandemics because humans cause them by the ways that we are and the things that we do By recognizing our risks Sholts suggests we can take actions to reduce them When the next pandemic happens and how bad it becomes are largely within our highly capable human hands and will be determined by what we do with our extraordinary human brains
