**Apparatus and Methods** ,2015 An expert system manages a power grid wherein charging stations are connected to the power grid with electric vehicles connected to the charging stations whereby the expert system selectively backfills power from connected electric vehicles to the power grid through a grid tie inverter if present within the charging stations In more traditional usage the expert system allows for electric vehicle charging coupled with user preferences as to charge time charge cost and charging station capabilities without exceeding the power grid capacity at any point A robust yet accurate

state of charge SOC calculation method is also presented whereby initially an open circuit voltage OCV based on sampled battery voltages and currents is calculated and then the SOC is obtained based on a mapping between a previously measured reference OCV ROCV and SOC The OCV SOC calculation method accommodates likely any battery type with any current profile
