Multimedia Semantics The Role Of Metadata Studies In Computational Intelligence:

Applications of Computational Intelligence in Biology Tomasz G. Smolinski, Mariofanna G. Milanova, Aboul-Ella Hassanien, 2008-06-10 Computational Intelligence CI has been a tremendously active area of search for the past decade or so. There are many successful applications of CI in many subfields of biology including bioinformatics, computational economics, protein structure prediction, or neuronal systems modeling and analysis. However, there still are many open problems in biology that are in desperate need of advanced and efficient computational methodologies to deal with tremendous amounts of data that those problems are plagued by. Fortunately, biology researchers are very often unaware of the abundance of computational techniques that they could put to use to help them analyze and understand the data underlying their research inquiries. On the other hand, computational intelligence practitioners are often unfamiliar with the particular problems that their new state-of-the-art algorithms could be successfully applied for. The separation between the two worlds is partially caused by the use of different languages in these two spheres of science but also by the relatively small number of publications devoted solely to the purpose of facilitating the exchange of new computational algorithms and methodologies on one hand and the needs of the biology realm on the other. The purpose of this book is to provide a medium for such an exchange of expertise and concerns. In order to achieve the goal, we have solicited contributions from both computational intelligence as well as biology researchers.

Advanced Computational Intelligence Paradigms in Healthcare - 3 Margarita Sordo, Sachin Vaidya, 2008-06-26 This volume details the latest state of the art research on computational intelligence paradigms in healthcare in the intelligent agent environment. The book presents seven chapters selected from the rapidly growing application areas of computational intelligence to healthcare systems. These include intelligent synthetic characters, man-machine interface, menu generators, analysis of user acceptance, pictures archiving and communication systems.

Advances in Web-Based Learning - ICWL 2010 Xiangfeng Luo, Marc Spaniol, Lizhe Wang, Qing Li, Wolfgang Nejdl, Wu Zhang, 2010-11-27 This book constitutes the refereed proceedings of the 9th International Conference on Web Based Learning ICWL 2010 held in Shanghai, China, in December 2010. The 36 revised full papers and 8 short papers presented were carefully reviewed and selected from 192 submissions. They deal with topics such as e-learning platforms and tools, technology-enhanced learning, web-based learning for oriental languages, mobile situated e-learning, learning resource deployment, organization and management, design model and framework of e-learning systems, e-learning metadata and standards, collaborative learning, and game-based learning, as well as practice and experience sharing and pedagogical issues.

Computational Intelligence: A Compendium John Fulcher, L. C. Jain, 2008-06-16 Computational Intelligence: A Compendium presents a well-structured overview about this rapidly growing field with contributions of leading experts in Computational Intelligence. The main focus of the compendium is on applied methods tried and proven effective to real-world problems, which is especially useful for practitioners, researchers, students, and also newcomers to the field. The 25 chapters are grouped into the following

Multimedia Semantics - The Role of Metadata Michael Granitzer,Mathias Lux,Marc Spaniol,2008-05-27 Research in the field of multimedia metadata is especially challenging Lots of scientific publications and reports on research projects are published every year and the range of possible applications is diverse and huge This book gives an overview on fundamental issues within the field of multimedia metadata focusing on contextualized ubiquitous accessible and interoperable services on a higher semantic level The book in hand provides a selection of basic articles being a base for multimedia metadata research

Furthermore it presents a view on the current state of the art in multimedia metadata research. It provides information from versatile applications domains: Broadcasting, Interactive TV, E-Learning and Social Software such as Multimedia on the Web 2.0, Databases for Multimedia, Meta-Data, Multimedia Information Retrieval and Evaluation, Multimedia Metadata Standards, Ontologies for Multimedia. The multimedia metadata community www.multimedia-metadata.info wherefrom this book originated brings together experts from research and industry in the area of multimedia metadata research and application development. The community bridges the gap between an academic research and an industrial scale development of innovative products. By summarizing the work of the community this book contributes to the aforementioned fields by addressing these topics for a broad range of readers.
