Multiple Regression and Beyond Timothy Z. Keith, 2014-12-19 Multiple Regression and Beyond offers a conceptually oriented introduction to multiple regression MR analysis and structural equation modeling SEM along with analyses that flow naturally from those methods. By focusing on the concepts and purposes of MR and related methods rather than the derivation and calculation of formulae this book introduces material to students more clearly and in a less threatening way. In addition to illuminating content necessary for coursework the accessibility of this approach means students are more likely to be able to conduct research using MR or SEM and more likely to use the methods wisely. Covers both MR and SEM while explaining their relevance to one another. Also includes path analysis confirmatory factor analysis and latent growth modeling. Figures and tables throughout provide examples and illustrate key concepts and techniques. For additional resources please visit <http://tzkeith.com>

**Applied Multivariate Research**

Lawrence S. Meyers, Glenn Gamst, A.J. Guarino, 2013. For me the comprehensive nature of the text is most important even when I don't cover topics in class, students gain value by being able to read about cluster analysis or ROC analysis in enough detail that they can conduct their own analyses. Students appreciate the integration with SPSS. There is an appropriate balance of practice and background so that students learn what they need to know about the techniques but also learn how to implement and interpret the analysis.

*Beyond Multiple Linear Regression* Paul Roback, Julie Legler, 2021-01-14. Beyond Multiple Linear Regression: Applied Generalized Linear Models and Multilevel Models in R is designed for undergraduate students who have successfully completed a multiple linear regression course, helping them develop an expanded modeling toolkit that includes non normal responses and correlated structure. Even though there is no mathematical prerequisite, the authors still introduce fairly sophisticated topics such as likelihood theory, zero inflated Poisson and parametric bootstrapping, in an intuitive and applied manner. The case studies and exercises feature real data and real research questions, thus most of the data in the textbook comes from collaborative research conducted by the authors and their students or from student projects. Every chapter features a variety of conceptual exercises, guided exercises, and open ended exercises using real data. After working through this material, students will develop an expanded toolkit and a greater appreciation for the wider world of data and statistical modeling. A solutions manual for all exercises is available to qualified instructors at the book's website at [www.routledge.com](http://www.routledge.com) and data sets and Rmd files for all case studies and exercises are available at the authors' GitHub repo <https://github.com/proback/BeyondMLR>.
