Practical GPU Programming Maris Fenlor,2025-02-20 If you're a Python pro looking to get the most out of your code with GPUs then Practical GPU Programming is the right book for you. This book will walk you through the basics of GPU architectures, show you hands on parallel programming techniques and give you the know how to confidently speed up real workloads in data processing, analytics and engineering. The first thing you'll do is set up the environment, install CUDA and get a handle on using Python libraries like PyCUDA and CuPy. You'll then dive into memory management, kernel execution and parallel patterns like reductions and histogram computations. Then we'll dive into sorting and search techniques but with a focus on how GPU acceleration transforms business data processing. We'll also put a strong emphasis on linear algebra to show you how to supercharge classic vector and matrix operations with cuBLAS and CuPy. Plus with batched computations, efficient broadcasting, custom kernels and mixed library workflows you can tackle both standard and advanced problems with ease. Throughout we evaluate numerical accuracy and performance side by side so you can understand both the strengths and limitations of GPU based solutions. The book covers nearly every essential skill and modern toolkit for practical GPU programming but it's not going to turn you into a master overnight. Key Learnings: Boost processing speed and efficiency for data intensive tasks. Use CuPy and PyCUDA to write and execute custom CUDA kernels. Maximize GPU occupancy and throughput efficiency by using optimal thread block and grid configuration. Reduce global memory bottlenecks in kernels by using shared memory and coalesced access patterns. Perform dynamic kernel compilation to ensure tailored performance. Use CuPy to carry out custom high speed elementwise GPU operations and expressions. Implement bitonic and radix sort algorithms for large or batch integer datasets. Execute parallel linear search kernels to detect patterns rapidly. Scale matrix operations using Batched GEMM and high level cuBLAS routines. Table of Content: Introduction to GPU Fundamentals, Setting up GPU Programming Environment, Basic Data Transfers and Memory Types, Simple Parallel Patterns, Introduction to Kernel Optimization, Working with PyCUDA and CuPy, Features, Practical Sorting and Search, Linear Algebra Essentials on GPU Accelerator Programming Using Directives.

Accelerator Programming Using Directives Sridutt Bhalachandra, Christopher Daley, Verónica Melesse Vergara, 2022-05-14 This book constitutes the proceedings of the 8th International Workshop on Accelerator Programming Using Directives (WACCPD 2021) which took place in November 2021. The conference was held as hybrid event. WACCPD is one of the major forums for bringing together users, developers and the software and tools community to share knowledge and experiences when programming emerging complex parallel computing systems. The 7 papers presented in this volume were carefully reviewed and selected from 11 submissions. They were organized in topical sections named Directive Alternatives, Directive Extensions and Directive Case Studies. *OpenCL Programming by Example* Ravishankar Banger, Koushik Bhattacharyya, 2013-12-23 This book follows an example driven, simplified and practical approach to using OpenCL for general purpose GPU programming. If you are a beginner in parallel programming and would like to quickly

accelerate your algorithms using OpenCL this book is perfect for you You will find the diverse topics and case studies in this book interesting and informative You will only require a good knowledge of C programming for this book and an understanding of parallel implementations will be useful but not necessary
