Hanisah Hamidon, 2015      *The Fate and One-dimensional Transport of Creighton Colloidal Silver Nanoparticles Through*

*Saturated Porous Media* Jessica M. Dagher, 2018 With the ubiquitous burst of nanotechnology silver nanoparticles AgNPs

have become indispensable in numerous industrial medicinal and research applications Consequently AgNPs have been

alarmingly disposed into subsurface water increasing the risk of human and environmental exposure While mechanisms of

AgNP cytotoxicity have been reported research studies on AgNP transport in subsurface water are needed according to U S

Environmental Protection Agency EPA The main goal of this study was to investigate the environmental fate and transport of

widely used Creighton colloidal AgNPs in a laboratory transport system simulating a porous saturated groundwater aquifer

To achieve this a large volume of AgNPs was synthesized characterized using a suite of well established analytical and

microscopy techniques and manipulated by tangential flow filtration AgNPs and a conservative tracer Cl as a potassium

chloride solution were pulse injected upward through a one dimensional laboratory column 5 cm in depth 2.5 cm diameter at

fixed pH flow rate and ionic strength and pore volume Breakthrough curves for AgNP transport were constructed using UV

Vis absorption flame atomic absorption spectroscopy FAAS and inductively coupled plasma optical emission spectroscopy ICP

OES Smaller AgNPs 120 nm in diameter were found to elute faster than larger AgNPs 1100 nm in diameter Flow rate and

AgNP size were found to influence the sorption of AgNPs onto the media as evidenced by the size and shape of the non

equilibrium breakthrough curves Facilitated transport was attributed to moderate electrostatic repulsions between the

negatively charged AgNPs and the polar glass beads The transport of the AgNPs through the one dimensional laboratory

system and the accurate ICP OES based quantification of nanosilver concentration in colloidal samples were translated into

two novel laboratory experiment modules which were successfully implemented into the Experimental Nanomaterials and

Nanoscience course and the Instrumental Analysis laboratory course at WSU respectively
