Questions

Textbook Notes

D. Measurement - Looking for some certain things.

Example: Student who is weighed on scale.

1. Reliability: consistency of a measure.
2. Validity: does a measure truly assess quality that it is claimed to measure? Truthfulness of a measure.

3. Accuracy: Agreement with a known standard (process of calibration).

Focus remains with these two because the 3rd will often be disputed.

E. Testable Questions -

- Can hypothesis/claim be falsified at least in principle (Notion of falsifiability) by Carl

F. Public Reporting: Many places they can publish.

- Peer Reviewed journals (most esteemed).
- Sci are proud and want to get it out
- Way yrs establish reputation
- We have to be aware of knowledge in order to advance and build on science.
- Allows others to make their own judgments even if original peer review.
- Allows sci to learn about findings and evaluate quality of

Monitor in Psychology Magazine

I titled this section "Questions" but I often write other misc things that I want to remember here. I think of it as a multi-purpose column

I didn't hear the last name of someone the professor mentioned during lecture so I left a blank space. If I think the name is important I can fill it in later if its mentioned or I know what to ask the prof later on.

Psychological Science (Peer Reviewed journal)

When I take a break from reading, I like to leave a note to remind me where I left off.

I highlight key terms that I think might be important

3. Possible limits of "free choice".

B. Science makes systematic observations

- Scientists' systematic observations include:
 - a. precise definitions of phenomena being observed
 - b. reliable + valid measuring tools that yield useful + interpretable data.
 - c. generally accepted methodological
 - d. System of logic for drawing conclusions and fitting those into general theories.

C. Science Produces Public Knowledge.

- An objective observation is someone who is completely objective (like Peirce thought). It just means something that can be verified by more than 1 observer.

- Done through replication where someone redoes another's study and gets same results.

• Replication can only be done if they know precisely what was done. This is done by rules that are found in Publication Manual of APA.

• Introspection: a form of precise self-report.

- The problem w/ introspect is that it's subjective and not verifiable.

- John B. Watson concluded that something can only be "scientific" if it's directly observable and can be verified.

• Watson felt behavior was the key for this. So he became the founder of behaviorism.

Now we observe behavior instead of introspect.

D. Science produces Data-Based Conclusions -

- Scientists are data-driven
- Conclusions about behavior need to be supported by some evidence.

I failed to do this in my template, but its always a good idea to include your name and a way to contact you, so if your notes get lost they can be returned to you
