Paramecium Identification Guide:

The Biology of Paramecium R. Wichterman, 2012-12-06 This completely revised updated and expanded edition has been necessitated by the many important newer discoveries that have been made since the publication of the first edition. That volume contained almost 2000 references from the 1600s to 1953. Since then and after an extensive search I have accumulated some 3800 additional titles from the world's literature on Paramecium. After certain titles that largely represented abstracts and preliminary reports that were followed by full research papers were eliminated approximately 4400 full titles from the 1600s to the present were selected for inclusion in this edition. Most of the titles in the Bibliography are the more recent ones beginning with 1953. I consider the Bibliography an important part of the book. A good title of a paper in a journal is a miniature abstract of its contents. Thus the reader who may be interested in obtaining additional information not found in the book may refer directly to the original source. A cursory examination of the Bibliography will reveal that paramecium research has extended into all branches of biology including biochemistry and biophysics. Like other areas of science paramecium research has become highly specialized and fragmented. I have attempted to organize and present the basic information in one book. Because of space limitations some items may have been dealt with briefly. It is in such instances that the Bibliography will be found to be invaluable.

Biodiversity of Ciliates and their Symbionts
Martina Schrallhammer, 2021-01-21 In the past three decades a stream of criminological inquiry has emerged which explores measures and theorizes crimes and harms to the environment at the micro, mezzo and macro levels. This green criminology as it has come to be known has widened the criminological gaze to consider crimes and harms committed against air, land, from forests to wetlands, nonhuman animals and water in local, regional, national and international areas or arenas. Accordingly green criminology has endeavored to understand the causes and consequences of air and water pollution, biodiversity loss, climate change, corporate environmental crime, e.g. illegal waste disposal, food production and distribution, resource extraction and exploitation and wildlife trade and trafficking while also exploring potential responses to these issues. This book seeks to introduce the green criminological perspective to a broader social science audience. Recognizing that green criminology is not the first social science to explore the phenomena and harms at the intersections of humanity and ecology, this book offers an introduction to some of the unique insights developed over nearly 30 years of green criminological thought and scholarship to students, professors, researchers and practitioners working in the fields of anthropology, economics, environmental humanities, environmental sociology, geography, history and political ecology. This book contains contributions from researchers in green criminology from around the world including early and mid-career scholars as well as more established voices in the field, all of whom are dedicated to exposing, understanding and ultimately hoping to thwart further environmental degradation and despoliation.
