Parametric Design For Architecture:

Parametric Design for Architecture Wassim Jabi, 2013-09-15 Architects use CAD to help them visualize their ideas. Parametric design is a fast growing development of CAD that lets architects and designers specify the key parameters of their model and make changes interactively. Whenever changes are made the rest of the model updates automatically. Through a detailed description of various parametric generative and algorithmic techniques this book provides a practical guide to generating geometric and topological solutions for various situations including explicit step by step tutorials. While the techniques and algorithms can be generalized to suit to any parametric environment the book illustrates its concepts using the scripting languages of one of the most powerful 3D visualization and animation design software systems Autodesk 3ds Max MAXScript one of the most popular open source Java based scripting environments Processing and a brand new language specifically tailored for parametric and generative design Autodesk DesignScript. This clear accessible book will have a wide appeal to students and practitioners who would like to experiment with parametric techniques.

Strategies for Parametric Design in Architecture Roland Hudson, 2010 A new specialist design role is emerging in the construction industry. The primary task related to this role is focused on the control development and sharing of geometric information with members of the design team in order to develop a design solution. Individuals engaged in this role can be described as parametric designers. Parametric design involves the exploration of multiple solutions to architectural design problems using parametric models. In the past these models have been defined by computer programs now commercially available parametric software provides a simpler means of creating these models. It is anticipated that the emergence of parametric designers will spread and a deeper understanding of the role is required. This thesis is aimed at establishing a detailed understanding of the tasks related to this new specialism and to develop a set of considerations that should be made when undertaking these tasks. The position of the parametric designer in architectural practice presents new opportunities in the design process. This thesis also aims to capture these developments in this field of design are driven by practice. It is proposed that a generalised understanding of applied parametric design is primarily developed through the study of practical experience. Two bodies of work inform this study. First a detailed analytical review of published work that focuses on the application of parametric technology and originates from practice. This material concentrates on the documentation of case studies from a limited number of practices. Second a series of case studies involving the author as participant and observer in the context of contemporary practice. This primary research of applied use of parametric tools is documented in detail and generalised findings are extracted. Analysis of the literature from practice and generalisations based on case studies is contrasted with a review of relevant design theory. Based on this a series of strategies for the parametric designer are identified and discussed.

Parametric Design in Architecture Carlos R. Barrios, 2013 Fundamentals methods and applications of parametric design for architects. Parametric design is a form of computer aided design in which geometrical elements such as architectural

components are defined and interconnected by variable attributes known as parameters. It counts as one of the most advanced methods in schools of architecture and is quickly becoming a standard in day to day architectural practice. Long the domain of mechanical engineering and automotive design, then explored by international avant garde architecture, parametric models can now be used as innovative tools for creative and efficient design work. This book explains parametric design, shows how it works and focuses on its functional advantages and practical applications. The author, Carlos R Barrios, is an architect with a background in computer science and fine arts. He has accompanied the development of parametric design at MIT in Cambridge and in cooperation with large practices such as SOM, KPF and Foster Partners and has conveyed the principles and applications for many years in teaching. Systematically structured, illustrated with international built examples and instructive drawings by the author, this book provides a thorough point of reference on a complex subject. **Case**

Studies in Parametric Design Jeffrey Collins, 2023-09-28. *Case Studies in Parametric Design* is a guide to scripting digital models for architects, designers and builders. The use of parametric design in architecture has afforded the realization of incredible built work. Modelling software can resolve complex geometry and aid in the development of stunning creations. Methods for creating the digital models to achieve these results, however, can be perplexing. Learning curves are steep and benefits garnered from adapting existing workflows to incorporate new tools may appear trivial. This book describes programming techniques for a variety of buildings and provides novices an understanding of language and processes, challenges intermediate users with rigor and intentionality and offers proficient practitioners objectives beyond novel form making. The case studies consist of six mass topologies and six facade topologies; each includes sample topology models and scripts, descriptions of steps for generating customizable parametric models and suggestions for additional modelling inquiries. This is essential reading for students and practitioners interested in harnessing the full potential of parametric design. **Parametric Design in Architecture** Birkhauser Verlag GmbH, 2013. Spectacle Ding Xu, 2022. In recent years, with the help of rapid computational developments, Parametric Design has become common in architectural practice. Parametric architecture, due to its unique appearance, has rapidly been associated with certain aesthetic trends. This is mostly because architects initially adopted it to make radical forms, not because parametric techniques demand any specific geometry. For the Chanel Mobile Art Pavilion by Zaha Hadid Architects, the team built a dynamic and fluid structure using parametric techniques. The form evolved from the spiraling shapes found in nature and the

fluid geometry provides a continuum of space and a system of logic As a mobile pavilion it is made of a succession of reduced arched segments in order to provide easy transportation In addition to the spectacle to behold this demonstrates what else parametric design can achieve and how parametric architecture has the potential to change Addressing this topic through an exhibition will give visitors a clear view of parametric architecture which consists of form making by simulating algorithms and morphogenesis then fabrication schemes then translating the intellectual and physical into the sensual By using the computer to simulate natural and morphogenetic forms then controlling the design and fabrication process of the pavilion exhibition through adjustment of the parameters visitors will witness parametric design in action The narrative space can be automatically generated and modeled by algorithms In addition to the form parametric design can produce a low technology fabrication scheme which is convenient for manufacturing accurate and efficient These features will be all presented in the pavilion Abstract

Parametric Design Approach in Architecture Between Concept and Reality, Theory and Practice. The Impact on Its Users and the Existing Setting Wissam Elmawi, 2023-04-19 Master's Thesis from the year 2022 in the subject Art Architecture History of Construction grade 1 8 Anhalt University of Applied Sciences Bauhaus Dessau course Design Research language English abstract This research investigates the evaluation of parametric based architecture in relation to its users and the surrounding environment The Phaeno Science Centre in Germany serves as a case study raising questions about how well the building fits with its local setting and users The study adopts a qualitative and quantitative methodology known as Post Occupancy Evaluation which seeks feedback from building users and architects The research emphasizes the need to distinguish between the behavior of complex systems and their users and the existing setting It stresses that evaluating parametric architecture requires an understanding of the whole context rather than just a single structure The study also suggests that architects should focus on the connectivity between built structures and users rather than ignoring it In addition the study highlights the importance of evaluating architecture in general and parametric architecture in particular given its widespread use in our built environment It advocates for the inclusion of the Post Construction Evaluation phase in the conventional core phases of the Architectural Design Process making it just as important as other stages The methodology for this study involves gathering data from numerous sources including users locals architects professionals journals newspapers libraries interviews surveys site visits and personal reflections By incorporating multiple viewpoints the study hopes to gain a comprehensive understanding of the perceptions surrounding parametric architecture Overall the study emphasizes the importance of evaluating parametric based architecture in relation to its users and the existing environment It stresses the need for architects to focus on the functional
