Acceptance and Commitment Therapy Dawn Johnson, Richard Bennett, 2023-08-29 Acceptance and Commitment Therapy ACT is an evidence based contemporary psychological approach to behaviour change that promotes the idea of people living more in line with their values whilst providing them with practical strategies for managing adversity. In this book Dawn Johnson and Richard Bennett have collated fifty of the questions that have most frequently been put to them whilst delivering ACT training and supervision to a wide range of therapists and other helping professionals. This book is the first of its kind to provide concise answers to a range of philosophical theoretical conceptual and practical questions raised by practitioners who are learning ACT. It will be of interest to psychotherapists, clinical psychologists, counsellors, psychiatrists and a broad range of other mental health practitioners and trainees. It serves as a useful resource for those new to the practice of ACT and for more experienced practitioners who might want to consider these questions themselves.

TECHNOLOGY IN MENTAL HEALTH Stephen Goss, Kate Anthony, LoriAnne Sykes Stretch, DeeAnna Merz Nagel, 2016-07-01 In the half decade since publication of the first edition there have been significant changes in society brought about by the exploding rise of technology in everyday lives

that also have an impact on our mental health. The most important of these has been the shift in the way human interaction itself is conducted especially with electronic text based exchanges. This expanded second edition is an extensive body of work. It contains 39 chapters on different aspects of technological innovation in mental health care from 54 expert contributors from all over the globe appropriate for a subject that holds such promise for a worldwide clientele and that applies to professionals in every country. The book is now presented in two clear sections the first addressing the technologies as they apply to being used within counseling and psychotherapy itself and the second section applying to training and supervision. Each chapter offers an introduction to the technology and discussion of its application to the therapeutic intervention being discussed in each case brought to life through vivid case material that shows its use in practice. Chapters also contain an examination of the ethical implications and cautions of the possibilities these technologies offer now and in the future. While the question once was should technology be used in the delivery of mental health services the question now is how to best use technology with whom and when. Whether one has been a therapist for a long time is a student or is simply new to the field this text will serve as an important and integral tool for better understanding the psychological struggles of one's clients and the impact that technology will have on one's practice. Psychotherapists, psychiatrists, counselors, social workers, nurses and in fact every professional in the field of mental health care can make use of the exciting opportunities technology presents.
