**Empirical Foundations of Information and Software Science** Jagdish C. Agrawal, 2012-12-06 The purpose of the Second Symposium on Empirical Foundations of Information and Software Science EFISS was in essence the same as that of the First Symposium in this series i.e. to explore subjects and methods of scientific inquiry which are of fundamental and common interest to information and software sciences and to map directions of research that will benefit from the mutual interaction of these two fields. In fact one of the most important results of the First EFISS Symposium was the conclusion that the commonality of these two sciences is much more than just the commonality of their objects of study namely the study of informative and prescriptive properties of texts in all kinds of sign systems such as natural or artificial languages. Rather the most challenging problems appear to be in the areas in which both these sciences overlap such as for instance the problem of trade offs between informative and prescriptive uses of texts. This problem can be formulated in generic terms as follows given a certain kind of action or activity which has been prescribed to some agent i.e. which is required to be implemented or carried out what kind of information should be provided to the agent in what form and how should it be distributed over the contextual structure of the prescriptive text to enable the agent to carry out the action or activity most effectively and efficiently.

**Foundations of Computing** Pradeep K. Sinha, Priti Sinha, 2022-12-12 DESCRIPTION If you wish to have a bright future in any profession today you cannot ignore having sound foundation in Information Technology IT. Hence you cannot ignore to have this book because it provides comprehensive coverage of all important topics in IT. Foundations of Computing is designed to introduce through a single book the important concepts of the Foundation Courses in Computer Science CS Computer Applications CA and Information Technology IT programs taught at undergraduate and postgraduate levels. WHAT YOU WILL LEARN Characteristics Evolution and Classification of computers Binary Octal and Hexadecimal Number systems Computer codes and Binary arithmetic Boolean algebra Logic gates Flip Flops and Design of Combinational and Sequential Circuits Computer architecture including design of CPU Memory Secondary storage and I/O devices Computer software how to acquire software and the commonly used tools and techniques for planning developing implementing and operating software systems Programming languages Operating systems Communication technologies Computer networks Multimedia computing and Information security Database and Data Science technologies The Internet Internet of Things IoT E Governance Geo informatics Medical Informatics Bioinformatics and many more WHO THIS BOOK IS FOR Students of CS CA and IT will find the book suitable for use as a textbook or reference book. Professionals will find it suitable for use as a reference book for topics in CS CA and IT.
