Decoding Generative AI Farabi Shayor, Kelina Lowther-Harris, Kirthana Srinivasan, Anoushka Samanta, 2024-04-16 The emergence of Generative AI has marked a significant turning point heralding a new age of innovation and intellectual exploration. Much like a compelling narrative this advancement in artificial intelligence has captivated the global community.

and ushered in an unprecedented surge of innovation. For many years the subtle hum of AI has been interconnected into the fabric of our society. Devices such as Echo Alexa and Google Home once considered avant garde are now seamlessly integrated into our homes and vehicles becoming essential navigators in our daily journeys. However this new phase of AI evolution is distinct. Capable of enhanced ability these new generative AI systems could easily discern the intuitive needs of their end users. With a mere command or a simple image generative AI systems can draft comprehensive reports, write legal documents or produce intricate visual masterpieces. Their proficiency can also be extended to routine and mundane tasks smoothly managing administrative duties, writing correspondences and providing invaluable support in professional settings. Although these foundation models require a vast amount of training data and billions of parameters to be effective the outcomes are equally remarkable. Technology companies and investors recognising the potential embarked on an investment spree steering a new era for the development of specialised models such as Microsoft CoPilot, Midjourney, ChatGPT and so on. As these technology companies continue to improve their language models each version seems to be more refined than its predecessor. Foremost among these are the Large Language Models (LLMs) emblematic of this AI renaissance. Now with voice activated capabilities generative AIs have become capable of much more in the relatively short span of their existence. With the integration of voice activated features combined with their capabilities to speak like a human being their potential continues to grow exponentially. They aren't labelled as chatbots anymore these AI systems signify a technological paradigm shift reshaping humanity's understanding of technology, automation and creative expression. However with such shift comes the imperative need for governance and control. The unchecked expansion of AI poses unmitigated challenges. In reality these advanced AIs have the potential to be transformative and destructive parallelly. Thus it is necessary to establish guidelines and oversight to ensure the ethical deployment of such systems which this book focuses on. As society stands at this transformative crossroads parallels are being drawn to the imaginative world of fiction. The concept of Jarvis AI from the fictitious world appears provocatively close to becoming a reality. The epoch of generative AI has truly dawned promising a future where technological prowess and human aspiration unite.

These technologies integral to the broader capabilities of AI are increasingly relevant in the healthcare sector particularly through the application of Generative AI and multimodal systems. Despite the potential of AI to significantly impact medical imaging and healthcare outcomes its full integration faces unique challenges posed by the complex nature of medical and biomedical data. Recent studies have shown promising results in enhancing diagnostic accuracy and treatment outcomes through AI yet there remain significant gaps in the seamless integration of these technologies into clinical practice. Current debates focus on the ethical implications data privacy concerns and the need for robust context aware AI models that can adapt to the dynamic nature of healthcare environments. Addressing these issues requires a concerted effort to develop innovative solutions that bridge the gap between technological advancements and practical healthcare applications. This Research Topic aims to explore innovative applications of foundation models in healthcare with a particular focus on Generative AI computer vision and natural language processing. The main objectives include demonstrating how these technologies can enhance diagnostic accuracy improve treatment outcomes and optimize healthcare operations. Specific questions to be addressed include How can generative models create synthetic datasets that enhance data availability and privacy What are the best practices for integrating language and vision models to generate accurate clinical reports How can zero shot learning be effectively applied in healthcare to ensure robust model performance without extensive task specific data. To gather further insights into the integration of AI in healthcare we welcome articles addressing but not limited to the following themes Image Analysis from Macro to Nano exploring foundation models for medical and biomedical image analysis in radiology and microscopy Generative AI and Synthetic Data applying efficient generation models to create synthetic
