possible promising target groups and gaps in the market by using the Sinus Milieus and Braunegger's models. A literature review of the authenticity, sustainability and independence concepts is followed by an in-depth analysis of eight SMEs which illustrates how these concepts are being communicated by existent entities. The findings show that start-ups in the fermented food and drink industry tend to use phrases and visual materials that can be categorized in five areas of authenticity while primarily focusing on one to two areas. It was noticed that 75 percent of analysed SMEs use their website to communicate their sustainability principles. Moreover, the examples exhibit the widespread use of glass and recyclable hemp as packaging materials. In addition, green delivery and CO₂ emission offsetting were found to play a significant role in today's sustainable SMEs. In the section on independence, the author hypothesizes the increasing importance of independence in the food and beverage business. Concludingly, the paper aims to assist companies to find their place in the market especially while competing with mainstream brands and large corporations. With the help of this toolset, these privately owned enterprises will be able to spend more time producing healthy desired products while creating significant added value that directly contributes to the EU economy. **Today's Therapeutic Trends**, 1993 *Nutrition Abstracts and Reviews*, 2004

Report Ciba Foundation, 1979 **Circadian Rhythms and Health Research Trends** Alfredo V. Lignelli, 2007. A circadian rhythm is a roughly 24-hour cycle in the physiological processes of living beings including plants, animals, fungi and cyanobacteria. The term circadian comes from the Latin *circa* around and *diem* day meaning literally about a day. The formal study of biological temporal rhythms such as daily, weekly, seasonal and annual rhythms is called chronobiology. In a strict sense, circadian rhythms are endogenously generated although they can be modulated by external cues such as sunlight and temperature. Most of a person's body systems demonstrate circadian variations. The body systems with the most prominent circadian variations are the sleep-wake cycle, the temperature regulation system and the endocrine system. The malfunctioning of a person's circadian system or biological clock causes circadian rhythm disorders. Circadian rhythms and their relation to health outcomes in the globalised hyper world of the 21st century are now understood to be extremely important. *Food Protection Trends*, 2009-07 **Trends**, 1995-02 **Finweek**, 2006-05
