Review of *Measuring Manhood: Race and the Science of Masculinity, 1830–1934* by Melissa N. Stein (University of Minnesota Press)

Alexis de Coning

ABSTRACT Melissa N. Stein's *Measuring Manhood* tackles the complex intersections of race, gender, sexuality, and their attendant "sciences" across a century of US history. While the burgeoning fields of ethnology and sexology were equally prominent in Europe during this period, her focus on the US specifies the ways in which American "racial scientists" and sexologists differed from their European counterparts, as their research was often used to justify or bolster nation-specific cultural norms and legislation. The concept of masculinity was not simply a matter of "masculine" in the narrow sense, but varied with it, a glint of other possibilities: humane, cultivated, a liberality, intelligence, morality, whiteness, citizenship, heterosexuality, and middle-class restraint. Stein manages to convey the complexity and reciprocity of these constructions in each chapter with careful argumentation and ample examples.

The publication of *Measuring Manhood: Race and the Science of Masculinity*

1830–1934 seems almost prescient at this juncture in the history of the United States. The increased visibility of state violence against African Americans, the re-emergence and rise of white nationalism and identitarianism, and anxieties around immigration and citizenship over the last few years provide a contemporary backdrop for the book's historical investigation of race and masculinity in the US.

Melissa N. Stein's *Measuring Manhood* tackles the complex intersections of race, gender, sexuality, and their attendant "sciences" across a century of US history. While the burgeoning fields of ethnology and sexology were equally prominent in Europe during this period, her focus on the US specifies the ways in which American "racial scientists" and sexologists differed from their European counterparts, as their research was often used to justify or bolster nation-specific cultural norms and legislation—chattel slavery and lynching, for instance. Stein notes that the 1830s provide the ideal turning point at which to begin her investigation: during the late eighteenth and early nineteenth centuries, European scientists "increasingly looked to the newly formed United States of America as a perfect laboratory for their theories about race," while American science was simultaneously "coming into its own" (11). Although Europe had "long seen a booming scientific literature on race dating back to the early modern period," (10) American ethnologists were respected in Europe, and the transatlantic exchange of ideas influenced ethnological thinkers across both continents; US racial scientists thus had a significant impact on European theories of racial difference. It is within this "perfect laboratory" that Stein traces the developments of scientific racism with extensive historical research, drawing on both primary and secondary sources to elucidate the constructions of normal and abnormal manhood.

Nonetheless, as the socio-political landscape became more contentious, the axioms of

Measuring Manhood Melissa N. Stein, 2015-09-01 From the gay gene to the female brain and African American students insufficient hereditary background for higher education arguments about a biological basis for human difference have reemerged in the twenty first century *Measuring Manhood* shows where they got their start Melissa N Stein analyzes how race became the purview of science in nineteenth and early twentieth century America and how it was constructed as a biological phenomenon with far reaching social cultural and political resonances She tells of scientific experts who advised the nation on its most pressing issues and exposes their use of gender and sex differences to conceptualize or buttress their claims about racial difference Stein examines the works of scientists and scholars from medicine biology ethnology and other fields to trace how their conclusions about human difference did no less than to legitimize sociopolitical hierarchy in the United States Covering a wide range of historical actors from Samuel Morton the infamous collector and measurer of skulls in the 1830s to NAACP leader and antilynching activist Walter White in the 1930s this book reveals the role of gender sex and sexuality in the scientific making and unmaking of race *Medicine, Science, and Making Race in Civil War America* Leslie A. Schwalm, 2023-02-14 This social and cultural history of Civil War medicine and science sheds important light on the question of why and how anti Black racism survived the destruction of slavery During the war white Northerners promoted ideas about Black inferiority under the guise of medical and scientific authority In particular the Sanitary Commission and Army medical personnel conducted wartime research aimed at proving Black medical and biological inferiority They not only subjected Black soldiers and refugees from slavery to substandard health care but also scrutinized them as objects of study This mistreatment of Black soldiers and civilians extended after life to include dissection dismemberment and disposal of the Black war dead in unmarked or mass graves and medical waste pits Simultaneously white medical and scientific investigators enhanced their professional standing by establishing their authority on the science of racial difference and hierarchy Drawing on archives of the U S Sanitary Commission recollections of Civil War soldiers and medical workers and testimonies from Black Americans Leslie A Schwalm exposes the racist ideas and practices that shaped wartime medicine and science Painstakingly researched and accessibly written this book helps readers understand the persistence of anti Black racism and health disparities during and after the war *A History of American Thought 1860-2000* Daniel Wickberg, 2023-09-07 This

book is a comprehensive overview of the history of modern American thought and examines a wide range of modern thought and thinkers from 1860 when Charles Darwin's *Origin of Species* was published in the United States to the end of the twentieth century. The focus of this volume is on the destabilizing effects of modern challenges to notions of fixed order and absolute truths and the contradictory consequences for philosophical, political, social, and aesthetic thought. The intellectual response to the unprecedented changes of this era produced visions of both liberation from the hierarchies of the past and new forms of control and constraint. One of the central contradictions in modern thought was between biological and cultural ideas of social, psychological, and moral order. This is the first work to provide an interpretive vision of the entire period under consideration. Topics covered include evolutionary thought, philosophical Pragmatism, ideas of race and gender, pluralism, and cultural relativism. Cold War Liberalism, science and religion, feminist thought, evolutionary psychology, and the late twentieth century Culture Wars. Thinkers from William James and Charlotte Perkins Gilman through Judith Butler and Cornel West are analyzed as historical figures. This volume is an ideal resource for a general audience as well as undergraduate and graduate students in the field of American intellectual history.

Literary Neurophysiology Randall K. Knoper, 2021. The book investigates the relations between American literature of the late nineteenth and early twentieth centuries and the sciences of the brain and the nervous system, showing how literary authors investigated, used, and challenged this emerging neurophysiology.

Whiskerology Sarah Gold McBride, 2025-06-03. *Whiskerology* traces how hair became a significant marker of identity and belonging in nineteenth-century America. Viewed during the colonial period as disposable to be donned or removed like clothing, hair later became an external sign of internal truths about the self, especially one's gender, race, and nationality.

An Organ of Murder Courtney E. Thompson, 2021-02-12. Finalist for the 2022 Cheiron Book Prize. *An Organ of Murder* explores the origins of both popular and elite theories of criminality in the nineteenth-century United States, focusing in particular on the influence of phrenology. In the United States, phrenology shaped the production of medico-legal knowledge around crime, the treatment of the criminal within prisons, and in public discourse and sociocultural expectations about the causes of crime. The criminal was phrenology's ideal research and demonstration subject, and the courtroom and the prison were essential spaces for the staging of scientific expertise. In particular, phrenology constructed ways of looking as well as a language for identifying, understanding, and analyzing criminals and their actions. This work traces the long-lasting influence of phrenological visual culture and language in American culture, law, and medicine, as well as the practical uses of phrenology in courts, prisons, and daily life.

Embodying Race Melissa Norelle Stein, 2008. This project uses the body as a site to examine the complex relationship between science, culture, and politics in the nineteenth and early twentieth-century United States and the ways in which gender and sex can be used to conceptualize other categories of difference, such as race and sexuality. Scientists during this period naturalized racial difference and socio-political exclusion by insisting that the bodies of racial minorities were not fully male or female at a time when power, citizenship, property, and protection were

conferred according to sex My dissertation makes other important interventions in the existing scholarship on nineteenth century racial and scientific thought as well as American race relations Rather than treating ethnology as static I reveal significant change over time in scientific discourse on race with regard to gender and sex Scientists shifting uses of sex and gender to denote racial difference corresponded to larger shifts in American politics and culture including Emancipation and the gendered questions of citizenship it raised the rise of evolutionary theory and turn of the century fears about miscegenation immigration homosexuality and race suicide This discourse was not one sided or monolithic however Accordingly I also explore tensions within and challenges to white racist science Moreover I demonstrate that scientific discourse was not divorced from the lives of real people it had a tangible impact on how living human bodies were treated Finally while recent scholarship has identified important parallels between racial and sexual science my work reveals that ethnology and sexology not only shared similar cultural politics in America they were literally populated by the same prominent scientists While at its core an intellectual history of scientific thought on race and gender this dissertation is not concerned only with ideas and discourse but how such ideas were received and how they shaped race relations Thus my work utilizes a variety of sources including scientific and medical texts newspaper articles private correspondence political writing and visual materials such as political cartoons and campaign posters to interrogate scientists engagement with sociopolitical issues as well as the incursion of scientific thought into political culture
