Mechanisms Of Differentiation Volume I:

Mechanisms of Differentiation Paul B. Fisher, 1990-08-27 Significant recent advances in cell culture technology now permit a detailed biochemical and molecular analysis of differentiation in both normal and tumor cells. These studies are important in attempting to understand the complex factors involved in normal growth and development as well as the abnormalities associated with carcinogenesis. *Mechanisms of Differentiation Volumes I and II* is comprised of review chapters addressing various topics of current interest in this important area of research. Topics discussed include genes controlling differentiation, changes in gene expression during differentiation, induction of differentiation, induction of differentiation as a mode of action of chemotherapeutic agents and the effect of cell shape, growth factors and differentiation modulating agents on the differentiated cell phenotype. *Mechanisms of Differentiation* is valuable to researchers involved in differentiation and development, carcinogenesis, cell biology, chemotherapy and immunology.

Bellvé, Henry James Vogel, 1991 *Molecular Mechanisms in Cellular Growth and Differentiation* describes the cellular differentiation and development. It emphasizes the pattern formation specifically the genesis of spatial relationships among the parts of a vertebrate or invertebrate organism, embryonic or adult. Organized into five parts, this book deals with the major steps leading from growth factor receptor interactions through transduction and modulation mechanisms to proliferative response. It also discusses the relation of growth factors and their receptors to oncogenes and to protooncogenes. It also elucidates the r
