Natural Capitalism Creating The Next Industrial Revolution:

Natural Capitalism Paul Hawken, Amory B. Lovins, L. Hunter Lovins, 1999 The first Industrial Revolution inaugurated 200 years of unparalleled material development for humankind But the costs and the consequences are now everywhere evermore apparent the living systems on which we depend are in retreat Forests topsoil grasslands wetlands oceans coral reefs the atmosphere aquifers tundra and biodiversity are limiting factors the natural capital on which all economic activity depends And they are all in decline Add to that a doubling of the world's population and a halving of available per capita resources in the first 50 years of the 21st century and the inevitability of change is clear This work offers forms of industry and commerce that can not only enhance enormously the wellbeing of the world's growing population but will reverse the destruction and pollution of nature and restore the natural processes so vital to the future The book introduces four central and interrelated strategies necessary to perpetuate abundance avert scarcity and deliver a solid basis for social development The first of these is Radical Resource Productivity getting two four or even ten times as much from the same quantities of materials and energy A revolution in efficiency that provides the most immediate opportunities for businesses to grow and prosper The second strategy is Ecological Redesign eliminating the very idea of waste by designing industrial systems on the model of ecological ones Instead for example of digging minerals out of the ground only to return them to landfill at the end of the product cycle industrial processes will be designed to reuse materials constantly in closed circles The third strategy involves creating A Service and Flow Economy shifting from an economy of goods and purchases to one of service and flow and redefining the relationship between producer and consumer Affluence will no longer be measured by acquisition and quantity but by the continuous receipt of quality utility and performance The final strategy is Investing in Natural capital reversing the worldwide ecosystem destruction to restore and expand the stocks of natural capital If industrial systems are to supply an increasing flow of services in the future the vital flow of services from living systems will have to be maintained or increased as well

Hawken, 2001-06-01 **Whole System Design** Peter Stasinopoulos, Michael H. Smith, Karlson Hargroves, Cheryl Desha, 2013-01-11 Whole System Design is increasingly being seen as one of the most cost effective ways to both increase the productivity and reduce the negative environmental impacts of an engineered system A focus on design is critical as the

output from this stage of the project locks in most of the economic and environmental performance of the designed system throughout its life which can span from a few years to many decades Indeed it is now widely acknowledged that all designers particularly engineers architects and industrial designers need to be able to understand and implement a whole system design approach This book provides a clear design methodology based on leading efforts in the field and is supported by worked examples that demonstrate how advances in energy materials and water productivity can be achieved through applying an integrated approach to sustainable engineering Chapters 1 5 outline the approach and explain how it can be implemented to enhance the established Systems Engineering framework Chapters 6 10 demonstrate through detailed worked examples the application of the approach to industrial pumping systems passenger vehicles electronics and computer systems temperature control of buildings and domestic water systems Published with The Natural Edge Project the World Federation of Engineering Organizations UNESCO and the Australian Government *Age of Impact* James

Marins,2021-09-20 In a time of correction terrorism corruption unemployment hunger cancer depression in which we are constantly bombarded by catastrophic news generating the negative instinct referred to by Hans Rosling the question that surrounds us is who cares Based on a narrative that is both light and impressively profound James Marins sets out to fight apathy and ignorance and make us feel the potential of the era in which we live After all our capacity for opinion action participation and collaboration at scale for systemic changes has never been greater To understand our possibilities we cannot limit ourselves to the narrow view of our personal horizon We need a more comprehensive complex and systemic analysis To do so Marins starts from three fundamental dimensions of the complex richness of our contemporary human condition the Transforming Movement of Freedom the Transforming Movement of Economy and the Transforming Movement of Consciousness All these movements are interconnected in order to constitute the Massive Transformative Movement the backdrop in which the author weaves the entire work The tools for action and for the updating of ourselves are available to all who care in what is humanity s best time our best opportunity *The Age of Impact* **Real Property Sustainable**
