## **Nature Unbound Conservation Capitalism And The Future Of Protected Areas:**

**Nature Unbound** Dan Brockington, Rosaleen Duffy, Jim Igoe, 2008 First Published in 2008 Routledge is an imprint of Taylor Francis an informa company    **Protected Areas, Sustainable Land?** Estienne Rodary, 2016-04-15 Protected areas such as nature reserves national parks and marine conservation areas are the main tool of nature conservation policies and are increasing on a worldwide scale They are one of the main forms of environmental planning and conservation institutions have increasing means at their disposal At the same time the goals of protected areas have become more diverse with the involvement of more stakeholders and complex institutional frameworks Giving an account of the extension and diversification of protected areas this book determines whether these two processes constitute a breakdown in conservation policies Economists ecologists lawyers anthropologists and geographers analyse the various trends which are fundamental to the future of protected areas to reveal a conflicting scene where narrative around cooperation and integration hides competition between different interests This book shows how protected areas are emerging as zones of divergent experimentations of sustainable development rather than lasting forms of integrative environmental management

**From Urban National Parks to NATURED Cities in the Global South** Frédéric Landy, 2018-07-20 This important volume focuses

on the sensitive issue of interrelationships between national parks situated near or within urban areas and their urban environment It engages with both urban and conservation issues and compares four national parks located in four large cities in the global South Rio de Janeiro Cape Town Mumbai and Nairobi Though primarily undertaken as academic research the project has intensively collaborated with the institutions in charge of these parks The comparative structure of this volume is also original and unique each of the chapters incorporates insight from all four sites as far as possible The term naturbanity expresses the necessity for cities endowed with a national park to integrate it into their functioning Conversely such parks must take into account their location in an urban environment both as a source of heavy pressures on nature and as a nexus of incentives to support their conservation The principle of non exclusivity that is neither the city nor the park has a right nor even the possibility to negate the other's presence summarizes the main argument of this book Naturbanity thus blurs the old modern dichotomy of nature culture animals and human beings can often jump the physical and ideological walls separating many parks from the adjacent city The 13 chapters and substantive introduction of this volume discuss various aspects of naturbanity the histories of park creation interaction between people and parks urban governance and parks urban conservation models wildlife management environmental education and so on This is a must read for students and researchers interested in social ecology social geography conservation urban planning and ecological policy

**The Ecotourism-Extraction Nexus** Bram Büscher, Veronica Davidov, 2013-08-15 Ecotourism and natural resource extraction may be seen as contradictory pursuits yet in reality they often take place side by side sometimes even supported by the same institutions Existing academic and policy literatures generally overlook the phenomenon of ecotourism in areas concurrently

affected by extraction industries but such a scenario is in fact increasingly common in resource rich developing nations This edited volume conceptualises and empirically analyses the ecotourism extraction nexus within the context of broader rural and livelihood changes in the places where these activities occur The volume s central premise is that these seemingly contradictory activities are empirically and conceptually more alike than often imagined and that they share common ground in ethnographic lived experiences in rural settings and broader political economic structures of power and control The book offers theoretical reflections on why ecotourism and natural resource extraction are systematically decoupled and epistemologically and analytically re links them through ethnographic case studies drawing on research from around the world It should be of interest to students and professionals engaged in the disciplines of geography anthropology and development studies

**New Frontiers of Land Control**

Nancy Lee Peluso,Christian Lund,2013-09-13 Questions about land control have invigorated thinkers in agrarian studies and economic history since the nineteenth century Exclusion alienation expropriation dispossession and violence animate histories of land use property rights and territories More recently agrarian environments have been transformed by processes of de agrarianization urbanization migration and new forms of primitive accumulation Even the classic agrarian question of how the social relations of agriculture will be influenced by capitalism has been reformulated at critical historical moments reviving or producing new debates around the importance of land control The authors in this volume focus on new frontiers of land control and their active creation These frontiers are sites where established power relationships are challenged by new enclosures and property regimes producing new social and environmental dynamics in their stead

Contributors examine labor and production processes engaged by new configurations of actors new agrarian and environmental subjects and the networks connecting them and new legal and violent means of challenging established or imminent land controls Overall we find that land control still matters though in changed degrees and manners Land control will continue to inspire struggles for a long time This book was originally published as a special issue of the Journal of Peasant Studies
