Nature's Clocks Douglas Macdougall, 2008-06-30 Radioactivity is like a clock that never needs adjusting writes Doug Macdougall It would be hard to design a more reliable timekeeper In *Nature's Clocks* Macdougall tells how scientists who were seeking to understand the past arrived at the ingenious techniques they now use to determine the age of objects and organisms By examining radiocarbon C 14 dating the best known of these methods and several other techniques that geologists use to decode the distant past Macdougall unwraps the last century's advances explaining how they reveal the age of our fossil ancestors such as Lucy the timing of the dinosaurs extinction and the precise ages of tiny mineral grains that date from the beginning of the earth's history In lively and accessible prose he describes how the science of geochronology has developed and flourished Relating these advances through the stories of the scientists themselves James Hutton William Smith Arthur Holmes Ernest Rutherford Willard Libby and Clair Patterson Macdougall shows how they used ingenuity and inspiration to construct one of modern science's most significant accomplishments a timescale for the earth's evolution and human prehistory

*Nature's Clocks* J. D. Macdougall, 2008 A lucid and engaging account of the scientific revolution that changed the way we think about our planet and ourselves James Lawrence Powell author of *Grand Canyon and Mysteries of Terra Firma*

*Why Geology Matters* J. D. Macdougall, 2011-05-02 Volcanic dust climate change tsunamis earthquakes geoscience explores phenomena that profoundly affect our lives But more than that as Doug Macdougall makes clear the science also provides important clues to the future of the planet In an entertaining and accessibly written narrative Macdougall gives an overview of Earth's astonishing history based on information extracted from rocks ice cores and other natural archives He explores such questions as What is the risk of an asteroid striking Earth Why does the temperature of the ocean millions of years ago matter today How are efforts to predict earthquakes progressing Macdougall also explains the legacy of greenhouse gases from Earth's past and shows how that legacy shapes our understanding of today's human caused climate change We find that geoscience in fact illuminates many of today's most pressing issues the availability of energy access to fresh water sustainable agriculture maintaining biodiversity and we discover how by applying new technologies and ideas we can use it to prepare for the future

*Choice* ,2008 *The Publishers Weekly* ,2008 **The Popular Science Monthly** ,1878 When We Are No More Abby Smith Rumsey,2016-03-01 Our memory gives the human species a unique evolutionary advantage Our stories ideas and innovations in a word our culture can be recorded and passed on to future generations Our enduring culture and restless curiosity have enabled us to invent powerful information technologies that give us invaluable perspective on our past and define our future Today we stand at the very edge of a vast uncharted digital landscape where our collective memory is

stored in ephemeral bits and bytes and lives in air conditioned server rooms What sources will historians turn to in 100 let  
 alone 1 000 years to understand our own time if all of our memory lives in digital codes that may no longer be decipherable  
 In *When We Are No More* Abby Smith Rumsey explores human memory from pre history to the present to shed light on the  
 grand challenge facing our world the abundance of information and scarcity of human attention Tracing the story from  
 cuneiform tablets and papyrus scrolls to movable type books and the birth of the Library of Congress Rumsey weaves a  
 compelling narrative that explores how humans have dealt with the problem of too much information throughout our history  
 and indeed how we might begin solve the same problem for our digital future Serving as a call to consciousness *When We  
 Are No More* explains why data storage is not memory why forgetting is the first step towards remembering and above all  
 why memory is about the future not the past If we re thinking 1 000 years 3 000 years ahead in the future we have to ask  
 ourselves how do we preserve all the bits that we need in order to correctly interpret the digital objects we create We are  
 nonchalantly throwing all of our data into what could become an information black hole without realizing it Vint Cerf Chief  
 Evangelist at Google at a press conference in February 2015 *Quill & Quire* ,2008 **Popular Science Monthly and
