Who's who in Scuba Diving Academy of Marine Sciences & Undersea Research,1992     *The Rough Guide to Thailand's Beaches and Islands* Paul Gray,Lucy Ridout,2002 A guide to the islands and beaches of Thailand from the popular resorts of Phuket Samai and Pattaya to the tranquil coves on Ko Tarutao Ko Lanta and Ko Chang The guide includes detailed recommendations of the best beaches for both families and partying as well as expert advice on diving snorkelling kayaking and other water sports     Scuba Diving Tourism Ghazali Musa,Kay Dimmock,2013-06-26 This volume offers new insight into an important and largely under examined area of marine leisure and tourism scuba diving tourism Knowledge of scuba diving has long been hidden among broad discussions of water based sports and activities and this focused book aims to shed further understanding and knowledge on this popular international activity The book examines the current issues central to research into and management of scuba diving Tourism from multidisciplinary perspectives such as health and safety climate change policy and regulation and the recreation leisure context It further reveals critical management issues of economic environmental and socio cultural impacts related to scuba diving tourism which extends to the influence of climate change on the industry s operations and future This significant volume which conceptualizes the issues surrounding scuba diving tourism now and in the future is written by leading experts in this field and will be valuable reading for all those interested in marine leisure and tourism     Pressure ,1987     **The New American Guide to Athletics, Sports & Recreation** Craig T. Norback,Peter G. Norback,1979     Geothermal Heat Flux at the COST B-2 and B-3 Wells, U. S. Atlantic Continental Margin B. Della Vedova,1987 Heat flow estimates at two sites on the U S Atlantic continental margin are presented An estimate of the heat flowing from the basement also has been obtained About 4 8 km of sediments penetrated at the COST B 2 and 4 0 km at the COST B 3 were deposited since the Upper Jurassic Well logs were used to evaluate thermal gradients and sedimentation rates whereas thermal conductivities and radiogenic heat productions were measured on drill cuttings samples A procedure to estimate in situ thermal conductivity from drill cuttings and well logs is described A substantial set of samples in the form of drill cuttings were sorted in four major lithologies sandstones siltstones shales and limestones Laboratory measurements of density porosity thermal conductivity quartz % potassium % uranium ppm and thorium ppm were performed on 128 reorganized and pulverized samples A significant correlation of the matrix thermal conductivity to quartz and potassium content was found In situ porosity and volume fraction of each lithology determined mainly from well

logs were used to calculate in situ mean thermal conductivity. Finally the mean in situ vertical component of the thermal conductivity as required for heat flow values has been estimated from a correction factor for the anisotropy of each lithology. The in situ temperature and anisotropy effects substantially decrease estimates of thermal conductivity at depth. Below the uppermost 1 km in both wells the best estimate of the thermal gradient is 26.3 °C km<sup>-1</sup> at COST B 2 and 26.1 °C km<sup>-1</sup> at COST B 3 whereas in situ mean thermal conductivities range between about 1.8 and 1.9 W m<sup>-1</sup> K<sup>-1</sup>. The average heat flow is estimated as about 45 mW m<sup>-2</sup> at COST B 2 and 44 mW m<sup>-2</sup> at COST B 3 with an uncertainty of about 20-25%. The mean radiogenic production in sediments at the two sites has been estimated as 1.83 COST B 2 and 1.44 COST B 3 10<sup>-6</sup> W m<sup>-3</sup>. With a 12-14 km thick sedimentary sequence a radioactive contribution of 20-25 mW m<sup>-2</sup> can be expected. The effects of sediment deposition, compaction, pore water advection and radiogenic heat production have been combined in a numerical model (Hutchison 1985) to estimate the undisturbed basement heat flux. Although the sedimentation depresses the basement heat flux by 15-20% this effect is more than compensated by radioactive heat production in the sediments so that the surface flux is estimated to be higher than that from the basement. The latter is calculated at about 33-39 mW m<sup>-2</sup> a relatively low value. The overall uncertainty is about 20-25% and other estimates on continental margins with thick sediments (e.g. Reiter and Jessop 1985) probably have at least a similar uncertainty. *Scuba Diving* Dennis Graver, 1999. Provides an explanation of respiration and circulation underwater, how to adapt to the aquatic environment, a detailed description of diving equipment and how to plan a successful and safe dive. *Discover Diving*, 1991. *Bibliography on Diving and Diving Safety for a Scientific Diving Program* Margaret A. Rioux, 1987. Diving, scientific diving and diver safety are specialized subject areas not generally well represented in even the largest of academic libraries largely because of difficulties in locating appropriate items to include in the collection. However in order to adequately fulfill his/her responsibilities the Diving Safety Officer of a scientific diving program needs easy access to a broad range of books, reports and journals covering all aspects of diving. This bibliography outlines a comprehensive collection appropriate to the needs of a scientific diving program in a research or academic institution. Items are grouped in broad subject areas corresponding to various aspects of the diving program. Both title and author indexes are also included. *Emergency Ascent Training Workshop*, 1979.
