**Precision FMCW Short-Range Radar for Industrial Applications** Boris A. Atayants, Viacheslav M.

Davydochkin, Victor V. Ezerskiy, Valery S. Parshin, Sergey M. Smolskiy, 2014-04-01 This book describes methods for making accurate radar measurements of short distances in applications where physical contact with materials is impractical. Sources of error are identified and methods of reducing these errors are described. Practical test procedures for measuring instruments are also provided. Much of the book is dedicated to providing radar engineers with practical applications detailing the conditions, equipment and approach of experimental estimation. With the help of computer simulation, the achievable advantages in accuracy of radar range measurement with various approaches are revealed and quantitatively estimated. Readers are also provided with methods of random process theory and mathematical statistics along with functional analysis and optimization.

**Robotic Sailing** Alexander Schlaefer, Ole Blaurock, 2011-07-15 While sailing has a long tradition both as a means of transportation and as a sport, robotic sailing is a fairly new area of research. One of its unique characteristics is the use of wind for propulsion. On the one hand, this allows for long range and long term autonomy. On the other hand, the dependency on changing winds presents a serious challenge for short and long term planning, collision avoidance and boat control. Moreover, building a robust and seaworthy sailing robot is no simple task, leading to a truly interdisciplinary engineering problem. These proceedings summarize the state of the art as presented at the International Robotic Sailing Conference 2011. Following an overview of the history of autonomous sailing, a number of recent boat designs are presented, ranging from small one design boats to vessels built to cross the Atlantic Ocean. Subsequently, various aspects of system design and validation are discussed further, highlighting the interdisciplinary nature of the field. Finally, methods for collision avoidance, localization and route planning are covered.

Wall, Andy Norris, 1992-07-20 Radar and ARPA Manual has been planned not only as a comprehensive practical reference for mariners on board ship and managers ashore but also to provide all essential information for candidates following ENS radar observer and professional certificate courses. Recent years have seen significant changes in the design of basic radar systems. ARPA features are now almost entirely integrated with the radar display. This new manual covers the complete radar ARPA installation bringing together a body of practical information on equipment and techniques which will both serve the observer using traditional systems and provide reliable guidance for the use of newer equipment. The recent changes in radar displays that are likely to be of greatest significance to the observer are

the developments in signal processing and the advent of raster scan displays these receive exhaustive treatment The effects of changes in shipboard operations such as false echoes from containers are also dealt with Throughout the book the operational significance of the IMO Performance Standards is stressed as is the role of radar and ARPA in navigation and collision avoidance    **Radar Set AN/TPL-1** War Department,1946    *Direct Support and General Support Maintenance Manual ,1985    Operator's and Organizational Maintenance Manual ,1986    Radar Set AN/MPG-1 and Radar Set AN/FPG-1 Service Manual ,1945    Installation Manual for Mariners Pathfinder Radar 12 & 16 Inch Systems Raytheon Manufacturing Company,1984*
