various areas of theoretical fluid mechanics Specifically Frehse and Ruzicka study the question of the existence of a regular solution to Navier Stokes equations in five dimensions by means of weighted estimates Pileckas surveys recent results regarding the solvability of the Stokes and Navier Stokes system in domains with outlets at infinity K R Rajagopal presents an introduction to a continuum approach to mixture theory with the emphasis on the constitutive equation boundary conditions and moving singular surface Finally Kaiser and von Wahl bring new results on stability of basic flow for the Taylor Couette problem in the small gap limit This volume would be indicated for those in the fields of applied mathematicians researchers in fluid mechanics and theoretical mechanics and mechanical engineers **Nonlinear Problems in Mathematical Physics and Related Topics II** Michael Sh.
