Near-Infrared Spectroscopy in Food Science and Technology Yukihiro Ozaki, W. Fred McClure, Alfred A.

Christy, 2006-10-25 This reference gives food science professionals a working understanding of near infrared spectroscopy NIRS and its role in maximizing food potential It explains the technical aspects of NIRS including basic principles characteristics of the NIR spectra instrumentation sampling techniques and chemometrics The book details applications of NIRS in agricultural and marine products foodstuffs and processed foods engineering and process monitoring and food safety and disease diagnosis *Near-infrared Spectroscopy in Agriculture*, 2004 Modern Techniques for Food Authentication

Da-Wen Sun, 2018-07-25 Modern Techniques for Food Authentication Second Edition presents a comprehensive review of the novel techniques available to authenticate food products including various spectroscopic technologies methods based on isotopic analysis and chromatography and other techniques based on DNA enzymatic analysis and electrophoresis This new edition pinpoints research and development trends for those working in research development and operations in the food industry giving them readily accessible information on modern food authentication techniques to ensure a safe and authentic food supply It will also serve as an essential reference source to undergraduate and postgraduate students and for researchers in universities and research institutions Presents emerging imaging techniques that have proven to be powerful non destructive tools for food authentication Includes applications of hyperspectral imaging to reflect the current trend of developments in food imaging technology for each topic area Provides pixel level visualization techniques needed for fast and effective food sample testing Contains two new chapters on Imaging Spectroscopic Techniques *Non-invasive and Non-destructive Methods for Food Integrity* Ana María Jiménez-Carvelo, Alejandra Arroyo-Cerezo, Luis

Cuadros-Rodríguez, 2024-12-16 There is an increasing need for the food industry to provide information to ensure quality requirements and prevent the food fraud applying in situ and on line technologies for full process control along the food chain In today s information age consumers want to be able to have as much information as possible about products quickly and efficiently Therefore the rapid detection of indicators that determine food quality and safety risks helps to ensure an effective and comprehensive food sovereignty system For this purpose the most powerful and commonly used analytical techniques are liquid or gas chromatography both coupled to different detection systems The use of these analytical techniques involves long analysis times and prior procedures of fitness for measuring such as sample pre treatment in which the use of reagents and chemical solvents that may be hazardous or harmful to the environment is common These facts highlight the need for the development of new analytical methods that offer the possibility of rapid non invasive on site environmentally friendly analyses that can be carried out along the entire production chain In addition recent technological developments and advances in data mining and machine learning offer the opportunity to introduce changes that could transform the role of food integrity *Non invasive and Non destructive Methods for Food Integrity* is dedicated to describing

the fundamentals and applications of existing analytical technologies and the current state of these techniques at industrial level The text utilizes reported studies and applications differentiating by particular food and beverage groups in order to provide a comprehensive and detailed overview of the current state of the art of non invasive non destructive analytical techniques for food quality and integrity For each technique covered an introduction is included and the chemical information obtained and why this technology is useful for food analysis Information on the instrumentation available for the application of each technique in food is also provided as well as information on data processing with reference to the treatment of the signal obtained and the use of chemometrics Applications published in scientific literature are detailed for different categories of similar foods based on the techniques that are already used for the routine control of food integrity This book provides guidance for potential users in the food industries and quality control laboratories for choosing which technology to implement based on the type of product and the results to be obtained Sustainability of Agricultural Environment in
