

Sustainably cooling buildings is about prioritising and combining all practices that reduce energy needs at city, building, individual and technological level, while also considering the local context and future climate change.

There is no one-size-fits-all solution and incorporating equitable access to cooling for the most vulnerable is part of the strategy. This visual offers non-exhaustive examples of options that can be combined and adopted.

1 City-area design

2 Building renovation and design

- Passive solutions
- Active solutions

3 Individual awareness, behaviour and good practices: non-exhaustive examples

Opening windows at night and close blinds during the day

Use of active cooling systems only if needed

Reduction use of AC: e.g. set thermostat to 22°C

Targeting of tailored communications and awareness raising to the most vulnerable

Creating voluntary networks to help people look after each other

Developing low energy efficient cooling technology for extreme temperatures

4 Innovation to be considered

Passive Low Energy Cooling Of Buildings

Passive Low Energy Cooling Of Buildings:

Passive Low Energy Cooling of Buildings Baruch Givoni,1994-07-27 A practical sourcebook for building designers providing comprehensive discussion of the impact of basic architectural choices on cooling efficiency including the layout and orientation of the structure window size and shading exterior color and even the use of plantings around the site All major varieties of passive cooling systems are presented with extensive analysis of performance in different types of buildings and in different climates ventilation radiant cooling evaporative cooling soil cooling and cooling of outdoor spaces

Low-energy Cooling Donald W. Abrams,1986 **Passive and Low Energy Cooling of Buildings** Baruch Givoni,1994-01-01 [A Handbook on Low-Energy Buildings and District-Energy Systems](#) L.D. Danny Harvey,2012-08-21 Winner of Choice Magazine Outstanding Academic Titles for 2007 Buildings account for over one third of global energy use and associated greenhouse gas emissions worldwide Reducing energy use by buildings is therefore an essential part of any strategy to reduce greenhouse gas emissions and thereby lessen the likelihood of potentially catastrophic climate change Bringing together a wealth of hard to obtain information on energy use and energy efficiency in buildings at a level which can be easily digested and applied Danny Harvey offers a comprehensive objective and critical sourcebook on low energy buildings Topics covered include thermal envelopes heating cooling heat pumps HVAC systems hot water lighting solar energy appliances and office equipment embodied energy buildings as systems and community integrated energy systems cogeneration district heating and district cooling The book includes exemplary buildings and techniques from North America Europe and Asia and combines a broad holistic perspective with technical detail in an accessible and insightful manner

Passive Cooling of Buildings D. Asimakopoulous,2013-10-31 Energy use in buildings in the EU represents about 40% of the total annual energy consumption With greater awareness of the need to reduce energy consumption comes a growth of interest in passive cooling particularly as an alternative to air conditioning This book describes the fundamentals of passive cooling together with the principles and formulae necessary for its successful implementation The material is comprised largely of information and results compiled under the SAVE European Research Programme **Low-Energy Cooling**

Technologies for Buildings Savvas A. Tassou,1998 Contains eight papers on current developments in technologies such as night ventilation for cooling slab cooling desiccant dehumidification and evaporative cooling chilled ceilings with displacement ventilation and mixed mode ventilation systems Covers design and control requirements and tools and techniques needed for successful integration of these technologies into a building structure No index Distributed by ASME Annotation copyrighted by Book News Inc Portland OR **Passive and Low Energy Building Design for Tropical Island Climates** N. V. Baker,Commonwealth Science Council,1987 This technical handbook aims to assist the architect and engineer in the problem of energy conservation in buildings in the tropical island climate [Advances in Passive Cooling](#) Mat Santamouris,2012-05-16 Following a rapid increase in the use of air conditioning in buildings of all types the energy

demand for powering such devices has become a significant cause for concern Passive cooling is increasingly being thought of as the best alternative to air conditioning This book offers the latest knowledge and techniques on passive cooling enabling building professionals to understand the state of the art and employ relevant new strategies With separate chapters on comfort urban microclimate solar control ventilation ground cooling and evaporative and radiative cooling this authoritative text will also be invaluable for architects engineers and students working on building physics and low energy design

Advances in Passive Cooling is part of the BEST series edited by Mat Santamouris The aim of the series is to present the most current high quality theoretical and application oriented material in the field of solar energy and energy efficient buildings Leading international experts cover the strategies and technologies that form the basis of high performance sustainable buildings crucial to enhancing our built and urban environment

Passive and Low Energy Architecture Simos Yannas, Arthur Bowen, International PLEA Organisation, 1983

Passive and Low Energy Architecture **Thermal Comfort and Energy-Efficient Cooling of Nonresidential Buildings** Doreen E. Kalz, Jens Pfafferott, 2014-03-26 This book supports HVAC planners in reducing the cooling energy demand improving the indoor environment and designing more cost effective building concepts High performance buildings have shown that it is possible to go clearly beyond the energy requirements of existing legislation and obtaining good thermal comfort However there is still a strong uncertainty in day to day practice due to the lack of legislative regulations for mixed mode buildings which are neither only naturally ventilated nor fully air conditioned but use a mix of different low energy cooling techniques Based on the findings from monitoring campaigns long term measurements in combination with field studies on thermal comfort simulation studies and a comprehensive review on existing standards and guidelines this book acts as a commonly accessible knowledge pool for passive and low energy cooling techniques

Climate Considerations in Building and Urban Design Baruch Givoni, 1998 Aimed at architecture and urban planning professionals and students alike Climate Considerations in Building and Urban Design offers real life solutions to climatological site planning and design issues helping to settle disputes about site orientation site organization and the assembly of building materials
