Twin Sisters® Digital MediaTM

Phonics Practice Ipad This Month:

iPads in the Early Years Michael Dezuanni, Karen Dooley, Sandra Gattenhof, Linda Knight, 2015-01-09 Digital devices such as smart phones and tablet computers are becoming commonplace in young children's lives for play entertainment learning and communication. Recently there has been a great deal of focus on the educational potential of these devices in both formal and informal educational settings. There is now an abundance of educational apps available to children parents and teachers which claim to enhance children's early literacy and numeracy development but to date there has been very little formal investigation of the educational potential of these devices. This book discusses the impact on children's learning when iPads were introduced in three very different early years settings in Brisbane Australia. It outlines how researchers worked with pre school teachers and parents to explore how iPads can assist with letter and word recognition the development of oral literacy and digital literacies and talk around play. Chapters consider the possibilities for using iPads for creativity and arts education through photography, storytelling, drawing, music creation and audio recording and critically examine the literacies enabled by educational software available on iPads and the relationship between digital play and literacy development. iPads in the Early Years provides exciting insights into children's digital culture and learning in the age of the iPad. It will be key reading for researchers, research students and teacher educators focusing on the early years as well as those with an interest in the role of ICTS and particularly tablet computers in education.

Early Brain Sprouts from States to Traits Meena

Chintapalli, 2017-05-30 Today the society is at a crossroads spending billions of dollars on fixing drug addiction problems, teen pregnancy and youth health risk behaviors and violence but unable to accomplish the goals. Prevalence of ADHD spectrum behaviors, explosive temper, bipolar disorder, violence everywhere, teen anxiety and depression and drug abuse problems are still high. NIH data shows that 40% of eighteen to thirty four year olds have some mental health issues that need help. Dollars are spent when changes cannot happen. If the same money is spent in educating general masses through the community organizations on the brain synaptic proliferation for zero to three year olds in their optimal intellectual cognitive personality development we certainly can create a better world. We can prevent ADHD, autism spectrum behaviors, learning disabilities, depression and psychosomatic illnesses by preventing aversive pathways during development at zero to five years old. Every child born needs to live on their strengths and talents with self confidence. The book discusses scientific facts on experiential neurodevelopment for physical, intellectual, psychological, social and emotional health in childrens zero to five year development and gives a curriculum to parents on sensory nurturing and multisensory integration with no expensive toys or gadgets.
