Updating Standard Cost Systems Carole B. Cheatham, Leo R. Cheatham, 1993-03-24 The new manufacturing environment requires new cost accounting systems as well as new technology While some authorities have advocated installing new and untried systems the authors of this book recommend updating the standard cost system which 85 percent of manufacturing firms have in place Updating the present system can achieve greater benefits in terms of providing information to managers for decision making It also allows the organization to avoid disruption to the corporate culture and the cost associated with a new system The authors show how standard cost systems can be redesigned to measure factors recognized to be important in today s manufacturing environment such as quality production levels and throughput They demonstrate how standard cost systems can foster continuous improvement through dynamic rather than static standards After examining characteristics of the new manufacturing environment and benefits of upgrading the cost system ways to update the traditional standard cost system are discussed Revisions include a unique input output method of variance analysis specific metrics related to manufacturing performance ways to identify cost drivers and use of dynamic standards

The authors demonstrate how to redesign the information gathering and reporting system as new manufacturing procedures are put in place. They discuss ways that marketing activities are affected and how to plan plant and equipment expenditures in an automated environment. This book is directed primarily towards accountants and managers needing to improve informational content of accounting data for decision making purposes. It should also be beneficial to any person within the business firm who either supplies data of this type or uses it such as project analysts, controllers, managers and even management trainees. Academicians teaching cost and managerial accounting as well as those teaching production management and financial decision making courses should find it beneficial as a text supplement or as a primary text in courses dealing with current problems in today's changing manufacturing environment.

Braverman, MD, 2008-12-23 New research in nutrition and weight loss has revealed an amazing discovery the brain virtually neglected in all other diet plans is the most important organ in dieting. Dieters can actually lose weight by eating foods, nutrients, teas and spices that change the chemical balance of the brain for permanent weight loss a major factor contributing to how quickly the body ages. In fact, everyone can take years off their age by changing their brain chemistry. In *Younger Thinner You Diet* Dr. Eric Braverman expands upon concepts introduced in *Younger You* to present a totally new approach to lifelong weight management where the key is not found in counting carbs, fat grams or calories. Obesity is a brain chemical imbalance an addictive disorder treated successfully only through the combined approach of diet, nutrients and hormones. One of the foremost experts in integrative medicine known for his work on the brain-body connection Dr. Braverman teaches readers which foods naturally boost the body's production of dopamine the chemical in the brain that tells the body to start its fat-burning engine how to choose foods, supplements, teas and spices even hormones and medicine to avoid the effects of other aging organs that can destroy one's metabolism how to personalize the diet for specific health concerns such as heart problems, aging skin, weak muscles and achy joints.
