[Digital Health Applications: Acceptance, Benefit Assessment, and Costs from the Perspective of Patients and Medical Professionals](#) Tonio Schoenfelder, Tom Schaal, Anja Mocek, 2024-11-12 Digital health applications DHAs are increasingly being used in patient care in various healthcare systems around the world. In some countries such as Belgium and Germany, legal frameworks already allow for DHA integration into standard care and their prescription and uniform reimbursement via the patient's health insurance. In many other European countries and the USA, such a process is still in development. DHAs are primarily used by patients themselves but also in consultation with physicians, therapists, or

other healthcare providers They offer the potential for improved health outcomes and increased access to health services especially in rural areas and may lead to an overall improvement in the quality of care The validity of studies on the effects of DHAs on patients and health care systems in general is currently limited since study methods applied do often not allow for drawing causal relationships and most studies focus only on patient outcomes but do not assess how traditional care processes need to be adapted so that DHAs can be effective Therefore unambiguous evidence on which patient relevant outcomes can be improved specifically as a result of integrating DHA into the process of care is currently lacking

Manson,1996 Coronary heart disease remains the leading cause of death in both men and women in most industrialized countries Yet it is largely preventable and health care providers can acquire the skills to help their patients reduce their risks substantially Traditional risk factors such as cigarette smoking hypercholesterolemia hypertension sedentary lifestyle obesity and glucose intolerance explain a major proportion of coronary events Recent evidence also suggests important adjunctive roles for hormone replacement therapy in postmenopausal women and aspirin prophylaxis in individuals at high risk of a first myocardial infarction Emerging evidence indicates an important role for diet in the prevention of heart disease Although the importance of lifestyle and behavioral modifications may well be known among physicians and other health care providers the implementation of this knowledge has been limited One reason is that the information supporting the value feasibility and cost effectiveness of risk reduction strategies has not been previously synthesized and made widely available to health care providers in office and community settings Prevention of Myocardial Infarction fills these critical gaps by providing a state of the art compendium of the scientific evidence on the efficacy of coronary disease prevention while focusing on helping clinicians develop intervention skills to utilize available knowledge
