**Sports Forecasting** Martin Spann, Bernd Skiera, 2014 This article compares the forecast accuracy of different methods namely prediction markets tipsters and betting odds and assesses the ability of prediction markets and tipsters to generate profits systematically in a betting market We present the results of an empirical study that uses data from 678 837 games of three seasons of the German premier soccer league Prediction markets and betting odds perform equally well in terms of forecasting accuracy but both methods strongly outperform tipsters A weighting based combination of the forecasts of these methods leads to a slightly higher forecast accuracy whereas a rule based combination improves forecast accuracy substantially However none of the forecasts leads to systematic monetary gains in betting markets because of the high fees 25% charged by the state owned bookmaker in Germany Lower fees e g approximately 12% or 0% would provide systematic profits if punters exploited the information from prediction markets and bet only on a selected number of games

[Make money with sports betting 1](#) Lorenz Laplace, 2021-10-15 Since 2019 this book exists in German now finally the English translation of this Buyer exists Lorenz Laplace succeeded in gaining a fortune of 20 000 EUR quite systematically through sports betting within three years with 1 000 EUR starting capital and many small bets with stakes of 20 50 EUR Laplace gives tips in easy to remember rules For example the main betting rule the tax favourites rule or the crass outsider rule The derivation of these tips is done in an understandable way

and the calculations are very easy to follow The core of his strategy for betting is based on the following insight the probabilities for a sporting event cannot be calculated exactly So every betting provider errs in setting the odds Some odds are too low others are too high for the outcome It is only necessary to recognise in which direction the betting provider errs e g in favour of the underdog or the favourite The bettor's error is analysed with the help of a four point plan and then the bets are placed naturally on the events that have received odds that are too high from the bettor In addition Lorenz Laplace gives other decisive tips e g how to optimally integrate promotions Deposit bonuses free bets cashback or combination bet insurance etc The book is a must for every betting enthusiast who wants to make long term profits with betting

**Punters - Who Bets and Which Bias Is Produced** Farshid Bröker, 2012-05-06 Master's Thesis from the year 2012 in the subject Economics Micro economics grade 1 3 Frankfurt School of Finance Management language English abstract The online sports betting markets industry has been gaining in popularity worldwide during the last decade The Internet gives punters faster access to their bookmaker and lets them easily compare the odds of many different bookmakers Furthermore many online gambling sites offer a wide range of different sports events and specialized bets for their customers Nowadays it is not only possible to bet on the final outcome of a soccer match but even on the half time result or the amount of goals scored during the match The betting exchange betfair makes it possible to bet against a certain outcome meaning the punter can act as a bookmaker for a chosen event Betting on outcomes of soccer matches is very interesting with regard to probability theory because it is based on a numerical code 0 for a draw 1 if the home team wins and 2 if the home team loses Therefore many textbooks on combinatorics consider soccer bets to be a prime example for probability theory H Matthes and H K chenhoff claim that soccer bets are a great example for the so called subjective probability which they define as the degree of confidence with which an observer believes in the occurrence of a certain event based on the information he currently has P A would be the maximum amount in EUR that he is willing to risk if he receives exactly EUR 1 on the occurrence of A For a bookmaker this would mean that his odd for a certain event will not exceed 2 if he believes that the probability of its occurrence is 50% Hence odds that are offered by a bookmaker on the occurrence of a certain result reflect his individual estimation regarding the probability of the occurrence of the given result Of course bookmakers can be wrong If it were possible to identify a pattern for their mistakes this would help in exploiting them Furtherm
