Healthy Aging Vs Ideas

Hey Jung Jun

Healthy Aging Vs Ideas:

Healthy Aging, Mental Health, and Sexuality Alex Siu-Wing Chan, Elsie Yan, Steve Wai Hee Chan, 2023-10-23 Sexuality is the manner in which we undergo and exhibit sexuality. It includes emotions, wants, behaviors, and identities as well as a variety of forms of physical contact or stimulation. Intimacy is a sense of togetherness and connection in a relationship which may or may not include physical contact. Aging creates possibilities for older individuals to reinterpret what sexuality and intimacy entail for them as a result of life changes. Certain older individuals want both a sexual and an intimate partnership while others are fine with either and some may opt to reject both sorts of partnership. Normal aging also causes physiological changes that might interfere with the capacity for and enjoyment of sexual activity. Our bodies, such as our size, skin, and muscular condition, shift as we age. Certain older individuals are unhappy with their deteriorating bodies. They may be concerned that their lover no longer finds them appealing. Intimacy and a satisfying sex life may be hindered by physical issues brought on by health disorders as well as by stress and anxiety. Men and women have different sexual problems. Erectile Dysfunction or ED occurs when a man has difficulty achieving or maintaining an erection. In certain cases, ED is caused by prostate cancer therapies such as prostatectomy, a procedure in which the prostate is surgically removed in its entirety or in part. The condition is also caused by other health issues such as excessive blood sugar, heart disease, or pelvic trauma. Notwithstanding the transformations brought on by natural aging, sexuality remains a vital aspect of our lifestyles as we age. Sexual health and function are essential elements of healthy aging. Sexual activity is connected with superior psychological health, self-esteem, marriage quality, as well as personal well-being, whereas its absence is linked to a worse standard of living. Considering the significance of sexual function and sexual well-being in evaluating healthy aging as well as the inadequate knowledge of urological health among elderly people, this research topic highlights some of the key urological health aspects relevant to the journeys and mental or medical consequences of healthy aging, psychological wellbeing, and sexuality. Among the broad questions of interest are the following: The experiences of older adults who identify as having a urological disorder or a mental disorder; Sexual health and sexual function dysfunction in older adults; Correlation between psychological disorder and urological health among older adults; Culture, sociological discussion between psychological distress and healthy aging among older adults; Addressing sexual function and sexual well-being and healthy aging; Case studies of effective practice; Specific sexual orientation issues among older adults with urological disorders; Incorporating a patient care address for older adults with urological illnesses into the community. We are thus seeking innovative research papers, review articles, hypothesis and theory pieces, viewpoint articles, short research report articles, commentary articles, opinion articles, and book reviews. We expect that by combining the ideas of scholars from diverse disciplines or contexts, we will be able to explore the relationship between the significance of sexual function and sexual well-being in defining healthy aging and bridge the knowledge gap in urological health among older adults.

Active and Healthy Aging and Quality of Life: Interventions and Outlook for the Future, volume II Shekhar Chauhan,Petra Heidler,David Jean Simon,2024-09-10 The continuous growth of older

populations as a consequence of demographic changes is a huge global challenge. The growing proportion of older adults not only burdens the healthcare system specifically in developing countries but also poses a challenge at the household level specifically in nuclear and one person households. For societies as a whole to avoid costly and negative effects it is crucial to increase their knowledge of how to promote good health among older adults so that they can live longer and enjoy a better quality of life. Active aging is the process of optimizing opportunities for health participation and security in order to enhance quality of life as people age. An active and healthy life has remained one of the most important aspirations for all people both young and older adults alike. This ambition has become a genuine possibility for many due to a rising life expectancy among people of diverse attributes across the world. While celebrating longer life and more financial security in later life than ever before we need to challenge how these aspirations can be sustained through our own behavioral responses and through public policy institutional reforms and innovations. The challenge is to identify, recommend and promote strategies and interventions that stimulate and sustain the activity, independence and health of people of all ages especially older adults and in the process promote the well-being and quality of life of people and make public welfare systems more sustainable.
