Hakimi, Thomas E. Milner, Govind R. Rajan, Brian J-F Wong, 2022-02-11 The surge in COVID 19 cases leading to hospitalizations around the world quickly depleted hospital resources and reserves forcing physicians to make extremely difficult life or death decisions on ventilator allocation between patients. Leaders in academia and industry have developed numerous ventilator support systems using both consumer and industry grade hardware to sustain life and to provide intermediate respiratory relief for hospitalized patients. This book is the first of its kind to discuss the respiratory pathophysiology underlying COVID 19, explain ventilator mechanics, provide and evaluate a repository of innovative ventilator support devices conceived amid the pandemic, and explain both hardware and software components necessary to develop an inexpensive ventilator support device. This book serves both as a historical record of the collaborative and innovative response to the anticipated ventilator shortage during the COVID 19 pandemic and as a guide for physicians, engineers, and DIYers interested in developing inexpensive transitory ventilator support devices.
