Abstract

Industry and trade representatives would characterize many of the same forces as “market access barriers” to foreign firms—generally ignoring the monopolization of markets that rapidly follows such access. Such issues have been central to international debates over cultural policy for some time, with much of the attention currently focused on China, where strict controls on cultural imports ensure that domestic, state-controlled companies control the market.

Study subjects

25000 people

The ESA conducted its last consumer survey in 2007 and is just beginning to release results from new online monitoring efforts. **The MPAA demoed its consumer-survey methodology in a massive 2005 study of twenty-two countries, but the high cost of the effort (involving some 25,000 people surveyed) has thus far precluded a follow-up.** The BSA’s method for measuring rates of software piracy, for its part, was developed in the late 1990s and is uniquely robust in the industry—in sharp contrast to its long-standing approach to losses

Findings

We use the word “piracy” to describe the ubiquitous, increasingly digital practices of copying that fall outside the boundaries of copyright law—up to 95% of it, if industry estimates of online music piracy are taken as an indicator (IFPI 2006)

The survey also claims that operating system piracy dropped from 68%
