Mediated Modeling A System Dynamics Approach To Environmental Consensus Building:

Mediated Modeling Marjan Van den Belt, 2004-04 Mediated modeling is an innovative new approach that enhances the use of computer models as invaluable tools to guide policy and management decisions Rather than having outside experts dispensing answers to local stakeholders mediated modeling brings together diverse interests to raise the shared level of understanding and foster a broad and deep consensus It provides a structured process based on system dynamics thinking in which community members government officials industry representatives and other stakeholders can work together to produce a coherent simple but elegant simulation model Mediated Modeling by Marjan Van Den Belt is a practical guide to participatory modeling for both practitioners and students one that is firmly theoretically grounded in the field of systems dynamics and environmental modeling Five in depth case studies describe the successful use of the technique in a variety of settings and a final chapter synthesizes the lessons highlighted by the case studies Mediated Modeling s step by step description of the techniques and practical advice regarding implementation offer a real world solution for all those seeking to make sound decisions about the environment *Handbook of Research methods and Applications in Environmental Studies* Matthias Ruth, 2015-08-28 This Handbook presents methods to advance the understanding of interdependencies between the well being of human societies and the performance of their biophysical environment It showcases applications to material and energy use urbanization and tech **Routledge Handbook of Ecological Economics** Clive L. Spash, 2017-04-07 Since becoming formally established with an international academic society in the late 1980s ecological economics has advanced understanding of the interactions between social and biophysical reality It initially combined questioning of the basis of mainstream economics with a concern for environmental degradation and limits to growth but has now advanced well beyond critique into theoretical analytical and policy alternatives Social ecological economics and transformation to an alternative future now form core ideas in an interdisciplinary approach combining insights from a range of disciplines including heterodox economics political ecology sociology political science social psychology applied philosophy environmental ethics and a range of natural sciences This handbook edited by a leading figure in the field demonstrates the dynamism of ecological economics in a wide ranging collection of state of the art essays Containing contributions from an array of international researchers who are pushing the boundaries of the field the Routledge Handbook of Ecological Economics showcases the diversity of the field and points the way forward A critical analytical perspective is combined with realism about how economic systems operate and their essential connection to the natural world and society This provides a rich understanding of how biophysical reality relates to and integrates with social reality Chapters provide succinct overviews of the literature covering a range of subject areas including heterodox thought on the environment society power and politics markets and consumption value and ethics science and society methods for evaluation and policy analysis policy challenges and the future post growth society The rich contents dispel the myth of there being no alternatives to current

Scheffran, 2018-10-12 Conflict is a major facet of many environmental challenges of our time However growing conflict complexity makes it more difficult to identify win win strategies for sustainable conflict resolution Innovative methods are needed to help predict understand and resolve conflicts in cooperative ways Agent Based Modeling of Environmental Conflict and Cooperation examines computer modeling techniques as an important set of tools for assessing environmental and resource based conflicts and ultimately for finding pathways to conflict resolution and cooperation This book has two major goals First it argues that complexity science can be a unifying framework for professions engaged in conflict studies and resolution including anthropology law management peace studies urban planning and geography Second this book presents an innovative framework for approaching conflicts as complex adaptive systems by using many forms of environmental analysis including system dynamics modeling agent based modeling evolutionary game theory viability theory and network analysis Known as VIABLE Values and Investments from Agent Based interaction and Learning in Environmental systems this framework allows users to model advanced facets of conflicts including institution building coalition formation adaptive learning and the potential for future conflict and conflict resolution based on the long term viability of the actors strategies

Written for scholars students practitioners and policy makers alike this book offers readers an extensive introduction to environmental conflict research and resolution techniques As the result of decades of research the text presents a strong argument for conflict modeling and reviews the most popular and advanced techniques including system dynamics modeling agent based modeling and participatory modeling methods This indispensable guide uses NetLogo a widely used and free modeling software package to implement the VIABLE modeling approach in three case study applications around the world Readers are invited to explore adapt modify and expand these models to conflicts they hope to better understand and resolve
