Medical And Care Compunetics 6 Studies In Health Technology And Informatics:

Perspectives on Digital Pathology Marcial García-Rojo, Bernd Blobel, Arvydas Laurinavicius, 2012 Multimedia information and digital images are increasingly important in the field of healthcare but establishing an adequate technological framework for their management and workable international standards to ensure compatibility and interoperability are crucial if they are to be employed effectively. This book presents the main research efforts of EURO TELEPATH an initiative of the European Corporation in Science and Technology COST Action IC0604. This program began in November 2007 and ran until November 2011. Its aim was to develop the standards and solutions necessary to represent, interpret, browse and retrieve digital medical images while preserving their diagnostic quality for clinical purposes, education and research. At the end of the project the most relevant researchers in the field of digital pathology – many of whom had been active members of EURO TELEPATH – were asked to contribute to a book which would compile the main research efforts of the European COST Action consortium. The book is divided into six parts. The first is an introduction to the instruments and activities of COST. This is followed by sections dealing with the state of the art in pathology, pathology business modeling, standards and specifications in pathology, the analysis, processing, retrieval and management of images, technology and automation in pathology and strategic developments and emerging research. As well as being a comprehensive overview of the IC0604 COST program, the book includes a selection of papers from American and Japanese researchers working in the same field.

World Congress on Medical Physics and Biomedical Engineering September 7 - 12, 2009 Munich, Germany Olaf Dössel, Wolfgang C. Schlegel, 2010-01-06 Present Your Research to the World. The World Congress 2009 on Medical Physics and Biomedical Engineering, the triennial scientific meeting of the IUPESM, is the world's leading forum for presenting the results of current scientific work in health related physics and technologies to an international audience. With more than 2 800 presentations it will be the biggest conference in the fields of Medical Physics and Biomedical Engineering in 2009. Medical physics, biomedical engineering and bioengineering have been driving forces of innovation and progress in medicine and healthcare over the past two decades. As new key technologies arise with significant potential to open new options in diagnostics and therapeutics, it is a multidisciplinary task to evaluate their benefit for medicine and healthcare with respect to the quality of performance and therapeutic output. Covering key aspects such as information and communication technologies, micro and nanosystems, optics and biotechnology, the congress will serve as an inter and multidisciplinary platform that brings together people from basic research, R & D, industry and medical application to discuss these issues. As a major event for science, medicine and technology, the congress provides a comprehensive overview and in-depth first hand information on new developments, advanced technologies and current and future applications. With this Final Program we would like to give you an overview of the dimension of the congress and invite you to join us in Munich.

Yet with the fast development in Internet technologies especially with the emergence of new data technologies and the mobile technologies new opportunities and perspectives are opened for advanced adaptive and personalized systems. Adaptation and personalization are posing new research and development challenges to nowadays CSCL systems. In particular adaptation should be focused in a multi-dimensional way cognitive technological context aware and personal. Moreover it should address the particularities of both individual learners and group collaboration. As a consequence the aim of this book is twofold. On the one hand it discusses the latest advances and findings in the area of intelligent adaptive and personalized learning systems. On the other hand it analyzes the new implementation perspectives for intelligent adaptive learning and collaborative systems that are brought by the advances in scripting languages, IMS LD, educational modeling languages and learning activity management systems.
