Paris,William R. Swartout,William C. Mann,2013-03-14 One of the aims of Natural Language Processing is to facilitate the use of computers by allowing their users to communicate in natural language

There are two important aspects to person machine communication understanding and generating While natural language understanding has been a major focus of research natural language generation is a relatively new and increasingly active field of research This book presents an overview of the state of the art in natural language generation describing both new results and directions for new research The principal emphasis of natural language generation is not only to facilitate the use of computers but also to develop a computational theory of human language ability In doing so it is a tool for extending clarifying and verifying theories that have been put forth in linguistics psychology and sociology about how people communicate A natural language generator will typically have access to a large body of knowledge from which to select information to present to users as well as means of expressing it Generating a text can thus be seen as a problem of means ways decision making under multiple constraints constraints from the propositional knowledge at hand from the linguistic tools available from the communicative goals and intentions to be achieved from the audience the text is aimed at and from the situation and past discourse Researchers in generation try to identify the factors involved in this process and determine how best to represent the factors and their dependencies

Current Research in Natural Language Generation

Robert Dale,Christopher S. Mellish,Michael Zock,1990 Natural language generation research has been boosted in the past decade by an increased engagement in the problems of constructing coherent and purposeful texts with computers In the course of this research many linguistic formalisms have been adopted This book provides a snapshot of the state of the art in natural language It gathers the leading U S and European NLG researchers and sets them in the context of five themes text planning linguistic realism building realization building descriptions and connectionist approaches

Empirical Methods in Natural Language Generation

Emiel Krahmer,Mariet Theune,2010-09-09 Natural language generation NLG is a subfield of natural language processing NLP that is often characterized as the study of automatically converting non linguistic representations e.g from databases or other knowledge sources into coherent natural language text In recent years the field has evolved substantially Perhaps the most important new development is the current emphasis on data oriented methods and empirical evaluation Progress in related areas such as machine translation dialogue system design and automatic text summarization and the resulting awareness of the importance of language generation the increasing availability of suitable corpora in recent years and the organization of shared tasks for NLG where different teams of researchers develop and evaluate their algorithms on a shared held out data set have had a considerable impact on the field and this book offers the first

comprehensive overview of recent empirically oriented NLG research

Advances in Natural Language Generation

Michael Zock,Gerard Sabah,1988 This collection of essays deals with the problem of natural language generation that is how to simulate by computer the determinism organization and expression of thoughts in oral or written form Compared to sentence or text analysis parsing little work has been done in the field of generation which is still a young discipline
