Party Competition An Agent Based Model Princeton Studies In Complexity:

Party Competition Michael Laver, Ernest Sergenti, 2012 Party competition for votes in free and fair elections involves complex interactions by multiple actors in political landscapes that are continuously evolving yet classical theoretical approaches to the subject leave many important questions unanswered Here Michael Laver and Ernest Sergenti offer the first comprehensive treatment of party competition using the computational techniques of agent based modeling This exciting new technology enables researchers to model competition between several different political parties for the support of voters with widely varying preferences on many different issues Laver and Sergenti model party competition as a true dynamic process in which political parties rise and fall a process where different politicians attack the same political problem in very different ways and where today's political actors lacking perfect information about the potential consequences of their choices must constantly adapt their behavior to yesterday's political outcomes Party Competition shows how agent based modeling can be used to accurately reflect how political systems really work It demonstrates that politicians who are satisfied with relatively modest vote shares often do better at winning votes than rivals who search ceaselessly for higher shares of the vote It reveals that politicians who pay close attention to their personal preferences when setting party policy often have more success than opponents who focus solely on the preferences of voters that some politicians have idiosyncratic valence advantages that enhance their electability and much more

The Governance Cycle in Parliamentary Democracies Scott de Marchi, Michael Laver, 2023-02-09 Parliamentary democracy involves a never ending cycle of elections government formations and the need for governments to survive in potentially hostile environments These conditions require members of any government to make decisions on a large number of issues some of which sharply divide them Officials resolve these divisions by logrolling conceding on issues they care less about in exchange for reciprocal concessions on issues to which they attach more importance Though realistically modeling this governance cycle is beyond the scope of traditional formal analysis this book attacks the problem computationally in two ways Firstly it models the behavior of functionally rational senior politicians who use informal decision heuristics to navigate their complex high stakes setting Secondly by applying computational methods to traditional game theory it uses artificial intelligence to model how hyper rational politicians might find strategies that are close to optimal

Computational Legal Studies Ryan Whalen, 2020-09-25 Featuring contributions from a diverse set of experts this thought provoking book offers a visionary introduction to the computational turn in law and the resulting emergence of the computational legal studies field It explores how computational data creation collection and analysis techniques are transforming the way in which we comprehend and study the law and the implications that this has for the future of legal studies

Agent-Based Computational Economics Shu-Heng Chen, 2017-09-19 This book aims to answer two questions that are fundamental to the study of agent based economic models what is agent based computational economics and why do we need agent based economic modelling of

economy This book provides a review of the development of agent based computational economics ACE from a perspective on how artificial economic agents are designed under the influences of complex sciences experimental economics artificial intelligence evolutionary biology psychology anthropology and neuroscience This book begins with a historical review of ACE by tracing its origins From a modelling viewpoint ACE brings truly decentralized procedures into market analysis from a single market to the whole economy This book also reviews how experimental economics and artificial intelligence have shaped the development of ACE For the former the book discusses how ACE models can be used to analyse the economic consequences of cognitive capacity personality and cultural inheritance For the latter the book covers the various tools used to construct artificial adaptive agents including reinforcement learning fuzzy decision rules neural networks and evolutionary computation This book will be of interest to graduate students researching computational economics experimental economics behavioural economics and research methodology

Hard Questions for Democracy Raj Chari, 2019-07-09 The recent financial and economic crisis has forced governments and people from around the globe to ask some hard questions about how democracy has evolved Some of these are old questions others are new Is democracy really the most desirable form of government How democratic is policy making during the financial and economic crisis Why do vote seeking parties in modern democracies actually make voters miserable Can women's under representation in politics be explained because of

voter bias Why are some citizens still excluded from voting in their country And can terrorist organizations that promote violence one day really become democratic the next This represents the first book of its kind to ask and answer a broad range of hard questions that need to be addressed in times of both flux and calls for democratic change throughout the world It does so by bringing together leading social scientists and rising stars from around the globe Interdisciplinary in its analysis it is essential reading for students of comparative and international politics political philosophy gender studies and economics The book s website can be found at www.democracyquestions.com and it was originally published as a special issue of Irish Political Studies

The Politics of Social Networks Astrid Hedin,2001 **Intelligent Agents** ,2001 **Between Jihad and McWorld** David Perusek,2010 This volume is the outgrowth of a conference aimed at situating questions of social justice within the broad social historical context of our times as outlined by Benjamin Barber in the international bestseller *Jihad vs McWorld* In it 15 contributors from across the academic spectrum grapple with questions of inequality culture communication education language representation democracy poverty and power in a variety of local global and cross cultural contexts that extend from North America to Japan the Middle Ages to Post Modernity They are joined by Benjamin Barber whose wide ranging and insightful contribution focuses on democracy and terrorism celebrates civil society and includes what he enumerates as oe6 rules for democracy Written at a time 5 years out from 9 11 when the Patriot Act and color coded terror alerts loomed large across the American Landscape when oewater boarding oerendering oeBlackwater and oeGitmo had become household words in much of the world when globalization and de industrialization were penetrating and re shaping societies and lives North and South as the world TM s rich grew richer and its poor poorer and wars without end in sight continued in the Middle East and elsewhere these essays are artifacts of those times our times This book should be of interest to many

Review of International Studies ,1981 **Guide to Reprints** ,2008 **Coligações partidárias na nova democracia brasileira** ,2010 **Wahl- und Wählerforschung** Franz Urban Pappi,Susumu Shikano,2007 *Archiv für Sozialgeschichte* ,2013 **INFORMS Annual Meeting** Institute for Operations Research and the Management Sciences. National Meeting,2008 **Agent-Based Strategizing** Duncan A. Robertson,2019-10-17 Strategic management is a system of continual disequilibrium with firms in a continual struggle for competitive advantage and relative fitness Models that are dynamic in nature are required if we are to really understand the complex notion of sustainable competitive advantage New tools are required to tackle challenges of how firms should compete in environments characterized by both exogeneous shocks and intense endogenous competition Agent based modelling of firms strategies offers an alternative analytical approach where individual firm or component parts of a firm are modelled each with their own strategy Where traditional models can assume homogeneity of actors agent based models simulate each firm individually This allows experimentation of strategic moves which is particularly important where reactions to strategic moves are non trivial This Element introduces agent based models and their use within management reviews the influential NK suite of

models and offers an agenda for the development of agent based models in strategic management *Agent Based Models of Competition and Collaboration* Harry James Goldingay,2010 *Complex Social and Behavioral Systems* Marilda Sotomayor,David Pérez-Castrillo,Filippo Castiglione,2020-08-21 This volume in the Encyclopedia of Complexity and Systems Science Second Edition combines the main features of Game Theory covering most of the fundamental theoretical aspects under the cooperative and non cooperative approaches with the procedures of Agent Based Modeling for studying complex systems composed of a large number of interacting entities with many degrees of freedom In Game Theory the cooperative approach focuses on the possible outcomes of the decision makers interaction by abstracting from the rational actions or decisions that may lead to these outcomes The non cooperative approach focuses on the actions that the decision makers can take As John von Neumann and Oskar Morgenstern argued in their path breaking book of 1944 entitled Theory of Games and Economic Behavior most economic questions should be analyzed as games The models of game theory are abstract representations of a number of real life situations and have applications to economics political science computer science evolutionary biology social psychology and law among others Agent Based Modeling ABM is a relatively new computational modeling paradigm which aims to construct the computational counterpart of a conceptual model of the system under study on the basis of discrete entities i e the agent with some properties and behavioral rules and then to simulate them in a computer to mimic the real phenomena Given the relative immaturity of this modeling paradigm and the broad spectrum of disciplines in which it is applied a clear cut and widely accepted definition of high level concepts of agents environment interactions and so on is still lacking This volume explores the state of the art in the development of a real ABM ontology to address the epistemological issues related to this emerging paradigm for modeling complex systems
