Remote Sensing Digital Image Analysis John A. Richards, 2022-01-06 *Remote Sensing Digital Image Analysis* provides a comprehensive treatment of the methods used for the processing and interpretation of remotely sensed image data. Over the past decade there have been continuing and significant developments in the algorithms used for the analysis of remote sensing imagery even though many of the fundamentals have substantially remained the same. As with its predecessors this new edition again presents material that has retained value but also includes newer techniques covered from the perspective of operational remote sensing. The book is designed as a teaching text for the senior undergraduate and postgraduate student and as a fundamental treatment for those engaged in research using digital image analysis in remote sensing. The presentation level is for the mathematical non specialist. Since the very great number of operational users of remote sensing come from the earth sciences communities the text is pitched at a level commensurate with their background. The chapters progress logically through means for the acquisition of remote sensing images techniques by which they can be corrected and methods for their interpretation. The prime focus is on applications of the methods so that worked examples are included and a set of problems conclude each chapter.

Computer Vision for Multimedia Applications: Methods and Solutions Wang, Jinjun, Cheng, Jian, Jiang, Shuqiang, 2010-10-31 This book presents the latest developments in computer vision methods applicable to various problems in multimedia computing including new ideas as well as problems in computer vision and multimedia computing. Provided by publisher. Computer Vision--ECCV '92 Giulio Sandini, 1992-04-29 This volume collects the papers accepted for presentation at the Second European Conference on Computer Vision held in Santa Margherita Ligure Italy May 19 22 1992.
