Patterns In Mathematics Grades 3-6 Investigating Patterns In Number Relationships:

Executive Skills and Reading Comprehension Kelly B. Cartwright, 2023-02-07 How do K-12 students become self-regulated learners who actively deploy comprehension strategies to make meaning from texts? This cutting-edge guide is the first book to highlight the importance of executive skills for improving reading comprehension. Chapters review the research base for particular executive functions, such as planning, organization, cognitive flexibility, and impulse control, and present practical skills-building strategies for the classroom. Detailed examples show what each skill looks like in real readers and sidebars draw explicit connections to the Common Core State Standards (CCSS).

Mindset Mathematics: Visualizing and Investigating Big Ideas, Grade 6 Jo Boaler, Jen Munson, Cathy Williams, 2019-01-07 Engage students in mathematics using growth mindset techniques. The most challenging parts of teaching mathematics are engaging students and helping them understand the connections between mathematics concepts. In this volume, you'll find a collection of low-floor, high-ceiling tasks that will help you do just that by looking at the big ideas at the sixth-grade level through visualization, play, and investigation. During their work with tens of thousands of teachers, authors Jo Boaler, Jen Munson, and Cathy Williams heard the same message that they want to incorporate more brain science into their math instruction but they need guidance in the techniques that work best to get across the concepts they needed to teach. So the authors designed Mindset Mathematics around the principle of active student engagement with tasks that reflect the latest brain science on learning. Open, creative, and visual math tasks have been shown to improve student test scores and more importantly, change their relationship with mathematics and start believing in their own potential. The tasks in Mindset Mathematics reflect the lessons from brain science that there is no such thing as a math person; anyone can learn mathematics to high levels. Mistakes, struggle, and challenge are the most important times for brain growth. Speed is unimportant in mathematics. Mathematics is a visual and beautiful subject and our brains want to think visually about mathematics. With engaging questions, open-ended tasks, and four-color visuals that will help kids get excited about mathematics, Mindset Mathematics is organized around nine big ideas which emphasize the connections within the Common Core State Standards (CCSS) and can be used with any current curriculum.
