Optimal Physical Activity across the Lifespan for People of All Abilities Ronald F. Zernicke , David Arthur Hart, Humans evolved to be mobile within the boundary conditions of Earth and many biological and physiologic systems depend on mechanical loading to maintain integrity during growth and maturation during skeletal maturity and during the aging process These systems subscribe to the use it or lose it principle and thus require continual use to maintain integrity Given that premise considerable basic and clinical research efforts have been directed at optimizing the effectiveness and positive impact of exercise on sports performance and the well being of those with intact systems However those with disabilities or compromised abilities also benefit from exercise protocols and there exists a need to focus attention on these populations as well Given the myriad of biological and physiological systems that benefit from exercise and mechanical loading there is a need for all humans of varying abilities to not only maintain the integrity of their health but to attempt to optimize it recognizing that optimizing each person s health across the stages of the life cycle may require different exercise protocols dependent on stage of life sex genetics and other individualized variables For those with physical disabilities embracing and maintaining such exercise protocols may be challenging but expanded research translation of

findings and integration of the outcomes into everyday life to enhance the health and well being of this significant population are needed going forward

Tinnitus Stepped-Care James A. Henry, 2025-11-10 Tinnitus clinical services are far from standardized and there is no system for credentialing clinicians for competency in providing tinnitus care. While a number of well established research based methods are available for the clinical management of tinnitus, no one method has been proven more effective than the others and differences in methodology result in different outcomes. Authored by James A. Henry PhD, internationally recognized tinnitus researcher and clinician, Tinnitus Stepped Care: A Standardized Framework for Clinical Practice provides a framework for addressing these differences in order to deliver tinnitus care in a logical, step-wise fashion. Clinicians can continue to utilize their preferred methodology but within the uniform framework that is offered by Tinnitus Stepped Care. A clinic adopting this framework would follow these specific steps:

- Step 1 Triage: Inform other hospitals and clinics in their geographic area about tinnitus and how to properly refer patients who complain of tinnitus.
- Step 2 Audiology Services: Conduct the initial assessment of patients using a minimum of specific measures that are consistent across clinics.
- Step 3 Tinnitus Education: Advance patients with bothersome tinnitus to learn about tinnitus, how and why it can be bothersome and what realistically can be done about it.
- Step 4 Tinnitus Counseling: Make available an established research based method of treatment for tinnitus.
- Step 5 Comprehensive Assessment: Conduct a comprehensive assessment for patients who require further care to determine why services thus far have been inadequate.
- Step 6 Expanded Treatment: Provide further treatment or refer patients to another tinnitus specialist to address any needs identified in Step 5.

Key Features: Includes reproducible clinical tools and assessments such as the Tinnitus Screener, Tinnitus and Hearing Survey, Sound Hypersensitivity Interview.

and Tinnitus Interview Provides detailed clinical algorithms flowcharts and visual aids including the Step 2 Audiology Services Decision Tree and the comprehensive Tinnitus Stepped Care flowchart to support decision making A dedicated chapter on how to screen for and assess hyperacusis misophonia noise sensitivity pain hyperacusis and phonophobia Discusses how testing the stepped care approach could be done with the creation of a learning health network LHN that is specific to tinnitus to foster collaborative clinical research and standardize tinnitus care nationally While primarily written for audiologists who are the main providers of tinnitus clinical services the book is also be appropriate for psychologists and other mental health clinicians who provide tinnitus counseling and for otolaryngologists who often see tinnitus patients but are generally unaware of the basic procedures for providing tinnitus care Please note ancillary materials such as forms and documents are not included as with the print version of this work
